Universal Gravitation

1. Suppose that two objects attract each other with a gravitational force of 16 units. If the distance between the two objects is doubled, what is the new force of attraction between the two objects?

$$F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad G, m_1, \text{ \& } m_2 \text{ is constant, so } = 1 \\ 16 = \frac{1}{(2)^2} \times 16 = \frac{1}{4} \times 16 = \boxed{4 \text{ units}}$$

2. Suppose that two objects attract each other with a gravitational force of 16 units. If the distance between the two objects is reduced in half, then what is the new force of attraction between the two objects?

$$F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad 16 = \frac{1}{(\frac{1}{2})^2} \times \frac{1}{4} = 4 \times \frac{1}{4} = \boxed{64 \text{ units}}$$

3. Suppose that two objects attract each other with a gravitational force of 16 units. If the mass of both objects was doubled, and if the distance between the objects remained the same, then what would be the new force of attraction between the two objects?

$$F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad 16 = \frac{(2)m_1 \times (2)m_2}{d^2} = 4 \times \boxed{16 \text{ units}}$$

4. Suppose that two objects attract each other with a gravitational force of 16 units. If the mass of both objects was doubled, and if the distance between the objects was doubled, then what would be the new force of attraction between the two objects?

$$F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad 16 = \frac{(2)(2)m_1 \times (2)m_2}{(2)^2 d^2} = \frac{4}{4} = \boxed{16 \text{ units}}$$

5. Suppose that two objects attract each other with a gravitational force of 16 units. If the mass of both objects was tripled, and if the distance between the objects was doubled, then what would be the new force of attraction between the two objects?

6. Suppose that two objects attract each other with a gravitational force of 16 units. If the mass of object 1 was doubled, and if the distance between the objects was tripled, then what would be the new force of attraction between the two objects?

$$\rightarrow 5. \quad F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad 16 = \frac{(6) \times (2)m_1 \times (3)m_2}{(2)^2 d^2} = \frac{9}{4} = 2.25 \times \boxed{16 \text{ units}}$$

$$\rightarrow 6. \quad F_{\text{grav}} = G \frac{m_1 \times m_2}{d^2}; \quad 16 = \frac{(2)(6) \times (2)m_1 \times m_2}{(3)^2 d^2} = \frac{4}{9} = \boxed{2.25 \text{ units}}$$

classic text Basic Physics will help teachers at both the high school and college levels gain new insights into and deeper understanding of many topics in both classical and modern physics that are commonly taught in introductory physics courses All of the original book is included with new content added Short sections of the previous book 174 in number are labeled Features These Features are highlighted in the book set forth in a separate Table of Contents and separately indexed Many teachers will value this book as a personal reference during a teaching year as various topics are addressed Ford s discussions of the history and meaning of topics from Newton s mechanics to Feynman s diagrams although written first in 1968 have beautifully withstood the test of time and are fully relevant to 21st century physics teaching The True Story of Modern Cosmology Emilio Elizalde,2021-08-19 This book tells the story of how over the past century dedicated observers and pioneering scientists achieved our current understanding of the universe It was in antiquity that humankind first attempted to explain the universe often with the help of myths and legends This book however focuses on the time when cosmology finally became a true science As the reader will learn this was a slow process extending over a large part of the 20th century and involving many astronomers cosmologists and theoretical physicists The book explains how empirical astronomical data e g Leavitt Slipher and Hubble were reconciled with Einstein s general relativity a challenge which finally led Friedmann De Sitter and Lema tre and eventually Einstein himself to a consistent understanding of the observational results The reader will realize the extraordinary implications of these achievements and how deeply they changed our vision of the cosmos From being small static immutable and eternal it became vast and dynamical originating from almost nothing and yet now nearly 14 billion years later undergoing accelerated expansion But as always happens as well as precious knowledge new mysteries have also been created where previously absolute certainty had reigned Reasons why Bradford Skow,2016 Reasons Why first argues that what philosophers are really after or at least should be after when they seek a theory of explanation is a theory of answers to why questions It then advances a thesis about what form a theory of answers to why questions should take a theory of answers to why questions should say what it takes for one fact to be a reason why another fact obtains The book s main thesis then is a theory of reasons why Every reason why some event happened is either a cause or a ground of that event Challenging this thesis are many examples philosophers have thought they have found of non causal explanations Reasons Why uses two ideas to show that these examples are not counterexamples to the theory it defends First is the idea that not every part of a good response to a why question is part of an answer to that why question Second is the idea that not every reason why something is a reason why an event happened is itself a reason why that event happened In the book s final chapter its theory of reasons why is extended to cover teleological answers to why questions and answers to why questions that give an agent s reason for acting
