Chapter 15: Drugs That Affect Urine Output

MULTIPLE CHOICE

BASIC CONCEPTS

1. What is the main intended action of any type of diuretic drug?
- a. Weight loss
 - b. Potassium loss
 - c. Increased urine output
 - d. Decreased sense of thirst

ANS: C

Diuretics are drugs that help rid the body of excess water and sodium by increasing a

person's urine output. They may work on the kidneys directly or may increase blood flow

to the kidney. Either way, these drugs cause a person to urinate more and lose water from

Pharmacological Approaches Targeting Neutrophilic Inflammation: Volume II Galina Sud'ina,Boris Victor Chernyak,Tsong-Long Hwang,Alexey Victorovich Sokolov,Roman A. Zinovkin,2022-12-22 *Understanding Pharmacology* Health Professnl Turley,2003-05 *Post-Translational Modifications (PTMs) in Human Cancer: Pharmacological Insights and Therapeutic Opportunities* Lei Huang,Hang Song,Pedro Ayuso Parejo,2025-08-21 Human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation Post translational modifications PTMs of proteins play a critical role in cancer development and progression PTMs are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell Pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body Pharmacological interventions that target PTMs are a promising area of cancer research and treatment For example PARP Inhibitors Poly ADP ribose polymerase PARP inhibitors are a class of drugs that exploit defects in DNA repair mechanisms particularly in cells

with BRCA mutations These inhibitors target the PARP protein which plays a role in DNA repair through PTM processes PARP inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers Ubiquitin Proteasome System UPS Inhibitors The UPS is responsible for the degradation of specific proteins tagged with ubiquitin Some drugs such as bortezomib inhibit the UPS leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells SUMOylation Inhibitors Small ubiquitin like modifier SUMO modification is a PTM that regulates the activity of various proteins Recent research has explored the development of SUMOylation inhibitors to target specific cancer related proteins These are still in the experimental stage The effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics It s important to note that the development and application of these therapies often require a deep understanding of the specific PTMs and their roles in the molecular pathways of different cancer types Additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique PTM profiles and genetic mutations of individual patients tumors Personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches Personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits This Research Topic will focus on post translational modifications PTMs and their role in human cancer within the field of pharmacology This is a highly relevant and significant area of study as understanding how PTMs contribute to cancer development and progression is critical for the development of targeted pharmacological interventions We welcome contributions in the form of Original Research Articles Reviews and Mini Reviews that cover but are not limited to the following topics a Post Translational Modifications PTMs in Cancer Molecular Mechanisms b Pharmacological Approaches Targeting PTMs in Cancer c Personalized Medicine and PTM Profiles d Emerging Trends and Future Directions Please note that If patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as additional clinical information and assessment of clinical response effects should be included If genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided Studies related to natural compounds herbal extracts or traditional medicine products will not be included in this Research Topic Studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this Research Topic

Traditional Processing Methods in Ethnopharmacology: Enhancing Therapeutic Effects and Unveiling Mechanisms of Action Lingyun Zhong,José Carlos Tavares Carvalho ,Bey Hing Goh,2025-03-10

Ethnopharmacology investigates traditional medicines derived from diverse plants animals and minerals used by cultures

worldwide Traditional processing methods may play a vital role in optimizing therapeutic effects reducing toxicity and improving overall properties of medicinal resources However the contrary may also be the case if for example toxic metabolites are extracted at a higher concentration These time honored techniques have been employed for centuries in traditional medicine to create effective and safe remedies Specialized processing techniques can even alter drug action sites or enhance the functional capabilities of medicinal substances As interest in TCM and other traditional medicines continues to grow researchers are striving to comprehend the scientific principles behind these processing methods and refine them for contemporary applications At the same time with our increasing understanding of medicinal plants chemical profiles therapeutic benefits and potential safety risks including interactions with other medications and direct toxicity there is a need to improve extraction techniques Optimized techniques may also reduce the environmental impact of such processing methods e g through reduced periods of decocting
