

**PART II**

**(40 marks)**

Answer any four questions in this part.

All questions carry equal marks.

12. (a) (i) Explain *fundamental quantity*.  
(ii) Mention **two quantities** which have the same unit as energy.
- (b) Sketch a velocity-time graph of the motion of a pendulum bob swinging from one end to another.
- (c) A metre rule of mass 15 g pivoted at the 30 cm mark balanced horizontally when a load of 25 g was hung at the 18 cm mark.  
(i) Sketch the set up.  
(ii) If the position of the pivot is moved to the 33 cm mark, by how much must the load be reduced to maintain the horizontal balance of rule?
13. (a) Distinguish between *elastic* and *inelastic* collisions.
- (b) A calorimeter containing 65 g of ice at  $-10^{\circ}\text{C}$  is heated uniformly until it boils after 180 s. Sketch a labelled graph to illustrate the variation of temperature of the ice with time.
- (c) A faulty Celsius thermometer reads  $5^{\circ}\text{C}$  at the melting point of pure ice and  $95^{\circ}\text{C}$  at the boiling point of water at normal pressure. Calculate the:  
(i) Correct temperature reading when it reads  $40^{\circ}\text{C}$   
(ii) Temperature at which its reading will be exactly the same as the correct temperature reading
14. (a) (i) State Snell's law of refraction.  
(ii) Why does a musical note, of the same amplitude and frequency being played on a flute, guitar and trumpet, sounds different?
- (b) (i) Mention **one similarity** between a camera and the human eye.  
(ii) Give **one difference** between a camera and the human eye.
- (c) A light ray travelled from water into the air at an angle of incidence of  $30^{\circ}$ . Calculate:  
(i) Its speed in water  
(ii) The angle of refraction in the air  
[Speed of light in air =  $3.0 \times 10^8 \text{ ms}^{-1}$ , refractive index of water = 1.33]

# Answer For Physics Objective Neco 2014

**Patrick Vollmar**

## Answer For Physics Objective Neco 2014:

**Supervised Machine Learning for Science** Christoph Molnar, Timo Freiesleben, 2024-10-31 Machine learning has revolutionized science from folding proteins and predicting tornadoes to studying human nature While science has always had an intimate relationship with prediction machine learning amplified this focus But can this hyper focus on prediction be justified Can a machine learning model be part of a scientific model Or are we on the wrong track In this book we explore and justify supervised machine learning in science However a naive application of supervised learning won't get you far because machine learning in raw form is unsuitable for science After all it lacks interpretability causality uncertainty quantification and many more desirable attributes Yet we already have all the puzzle pieces needed to improve machine learning from incorporating domain knowledge to creating robust interpretable and causal models The problem is that the solutions are scattered everywhere In this book we bring together the philosophical justification and the solutions that make supervised machine learning a powerful tool for science The book consists of two parts Part 1 justifies the use of machine learning in science Part 2 discusses how to integrate machine learning into science *Habits: plasticity, learning and freedom* Javier Bernacer, Jose Angel Lombo, Jose Ignacio Murillo, 2015-11-05 In present times certain fields of science are becoming aware of the necessity to go beyond a restrictive specialization and establish an open dialogue with other disciplines Such is the case of the approach that neuroscience and philosophy are performing in the last decade However this increasing interest in a multidisciplinary perspective should not be understood in our opinion as a new phenomenon but rather as a return to a classical standpoint a proper understanding of human features organic cognitive volitional motor or behavioral for example requires a context that includes the global dimension of the human being We believe that grand neuroscientific conclusions about the mind should take into account what philosophical reflection has said about it likewise philosophers should consider the organic constitution of the brain to draw inferences about the mind Thus both neuroscience and philosophy would benefit from each other's achievements through a fruitful dialogue One of the main problems a multidisciplinary group encounters is terminology the same term has a different scope in various fields sometimes even contradictory Such is the case of habits from a neuroscientific perspective a habit is a mere automation of an action It is therefore linked to rigidity and limitation However from a classical philosophical account a habit is an enabling capacity acquired through practice which facilitates improves and reinforces the performance of certain kind of actions From neuroscience habit acquisition restricts a subject's action to the learnt habit from philosophy habit acquisition allows the subject to set a distance from the simple motor performance to cognitively enrich the action For example playing piano is a technical habit considering the neuroscientific account a pianist would just play those sequences of keystrokes that had been repeatedly practiced in the past However according to the philosophical perspective it would allow the pianist to improvise and moreover go beyond the movements of their hands to concentrate in other features of musical interpretation In other

words a holistic view of habits focuses on the subject's disposition when facing both known and novel situations. We believe neuroscience could contribute to achieve a deeper understanding of the neural bases of habits whose complexity could be deciphered by a philosophical reflection. Thus we propose this Research Topic to increase our understanding on habits from a wide point of view. This collection of new experimental research, empirical and theoretical reviews, general commentaries and opinion articles covers the following subjects: habit learning, implicit memory, computational and complex dynamical accounts of habit formation, practical cognitive, perceptual and motor habits, early learning, intentionality, consciousness in habits, performance, neurological and psychiatric disorders related to habits such as obsessive compulsive disorder, stereotypes or addiction, habits as enabling or limiting capacities for the agent.

**Anatomy and Plasticity in Large-Scale Brain Models**  
Markus Butz, Wolfram Schenck, Arjen van Ooyen, 2017-01-05

Supercomputing facilities are becoming increasingly available for simulating activity dynamics in large scale neuronal networks. On today's most advanced supercomputers networks with up to a billion of neurons can be readily simulated. However building biologically realistic full scale brain models requires more than just a huge number of neurons. In addition to network size the detailed local and global anatomy of neuronal connections is of crucial importance. Moreover anatomical connectivity is not fixed but can rewire throughout life, structural plasticity, an aspect that is missing in most current network models in which plasticity is confined to changes in synaptic strength, synaptic plasticity. The papers in this Ebook which may broadly be divided into three themes aim to bring together high performance computing with recent experimental and computational research in neuroanatomy. In the first theme fiber connectivity new methods are described for measuring and data basing microscopic and macroscopic connectivity. In the second theme structural plasticity novel models are introduced that incorporate morphological plasticity and rewiring of anatomical connections. In the third theme large scale simulations simulations of large scale neuronal networks are presented with an emphasis on anatomical detail and plasticity mechanisms. Together the articles in this Ebook make the reader aware of the methods and models by which large scale brain networks running on supercomputers can be extended to include anatomical detail and plasticity.
