

EARTHWORM DISSECTION

External Anatomy

1. Examine your earthworm and determine the dorsal and ventral sides. Locate the two openings on the ventral surface of the earthworm. The openings toward the anterior of the worm are the **sperm ducts**. The openings near the clitellum are the **genital setae**.
2. Locate the dark line that runs down the dorsal side of the worm, this is the **dorsal blood vessel**. The **ventral blood vessel** can be seen on the underside of the worm, though it is usually not as dark.
3. Locate the worm's **mouth** and **anus**.
4. Note the swelling of the earthworm near its anterior side - this is the **clitellum**.

MOUTH

ANUS

Internal Anatomy

1. Place the specimen in the dissecting pan **DORSAL** side up.
2. Locate the clitellum and insert the tip of the scissors about 3 cm posterior.
3. Cut carefully all the way up to the head. Try to keep the scissors pointed up, and only cut through the skin.
4. Spread the skin of the worm out, use a teasing needle to gently tear the septa (little thread like structures that hold the skin to organs below it)
5. Place pins in the skin to hold it apart, angle the pins out so that they are not in your way.
