

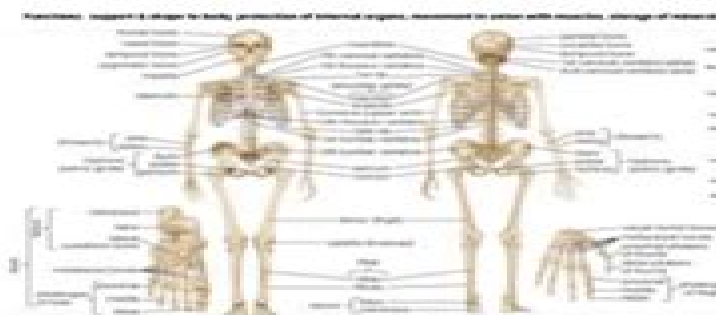

Diagram 3: Types of Joints
 Joints are classified into three types: fibrous, cartilaginous, and synovial.
 1. Fibrous Joints: These joints are formed by fibrous tissue. Examples include the sutures of the skull and the syndesmosis between the tibia and fibula.
 2. Cartilaginous Joints: These joints are formed by cartilage. Examples include the intervertebral discs and the pubic symphysis.
 3. Synovial Joints: These joints are formed by a synovial cavity. Examples include the knee, hip, and elbow.
 The diagram also shows the structure of a synovial joint, including the articular surface, articular cartilage, synovial fluid, and the joint capsule.

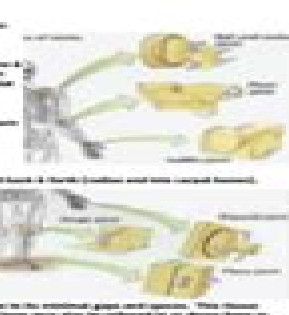

Diagram 6: Ossification of Long Bones
 The diagram illustrates the process of endochondral ossification, where a cartilaginous model of a bone is replaced by bone tissue. The process involves the formation of the primary ossification center and the secondary ossification center.

Diagram 7: Bone Structure and Function
 Bone is a complex tissue that provides structural support and protection. It is composed of organic and inorganic components. The organic component includes collagen and proteoglycans, while the inorganic component includes calcium and phosphate. Bone also contains living cells, including osteocytes, osteoblasts, and osteoclasts.

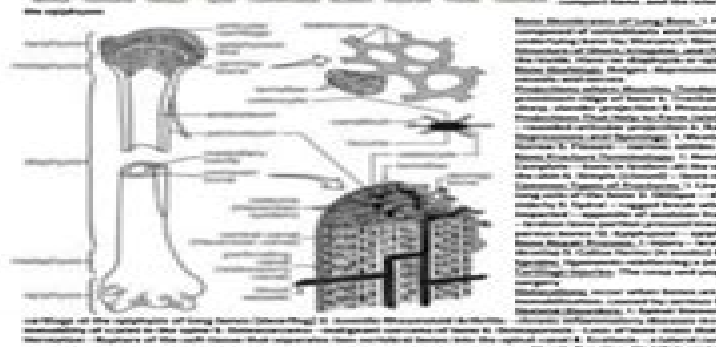

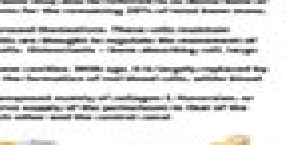

Diagram 10: Bone Remodeling Process
 The diagram illustrates the steps of bone remodeling: 1. Bone resorption by osteoclasts, 2. Bone formation by osteoblasts, and 3. Bone remodeling by osteocytes.

Diagram 11: Bone Remodeling Regulation
 The diagram shows the hormonal regulation of bone remodeling. Parathyroid hormone (PTH) stimulates bone resorption, while calcitonin inhibits it. Vitamin D also plays a role in bone metabolism.

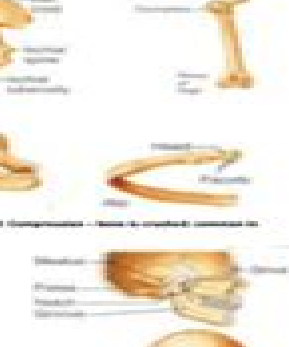

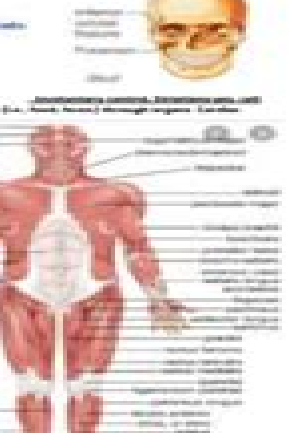

Diagram 14: Muscle Structure and Function
 Muscle is a specialized tissue that contracts to produce movement. It is composed of muscle fibers, which are surrounded by a sarcolemma. The sarcolemma contains voltage-gated ion channels and gap junctions. The interior of the muscle fiber contains myofibrils, which are the contractile units of the muscle.

Diagram 15: Muscle Contraction
 The diagram illustrates the process of muscle contraction, where the myofibrils slide past each other, resulting in the shortening of the muscle. This process is regulated by calcium ions and ATP.

Anatomy Science Olympiad Study Guide
