Jain,2018-11-30 This book highlights papers presented at the Second International Conference on Smart Vehicular Technology Transportation Communication and Applications VTCA 2018 which was held at Mount Emei Sichuan Province China from 25 to 28 October 2018 The conference was co sponsored by Springer Southwest Jiaotong University Fujian University of Technology Chang an University Shandong University of Science and Technology Fujian Provincial Key Lab of Big Data Mining and Applications and the National Demonstration Center for Experimental Electronic Information and Electrical Technology Education Fujian University of Technology The conference was intended as an international forum for researchers and professionals engaged in all areas of smart vehicular technology vehicular transportation vehicular communication and applications *Mechanical and Electronics Engineering III* Han Zhao,2011-10-27 Selected peer reviewed papers from the 2011 3rd International Conference on Mechanical and Electronics Engineering ICMEE 2011 September 23 25 2011 Hefei China **Non-conventional Electrical Machines** Abderrezak Rezzoug,Mohammed El-Hadi Zaim,2013-02-04 The developments of electrical machines are due to the convergence of material progress improved calculation tools and new feeding sources Among the many recent machines the authors have chosen in this first book to relate the progress in slow speed machines high speed machines and superconducting machines The first part of the book is dedicated to materials and an overview of magnetism mechanic and heat transfer

Development of Brushless Self-excited and Self-regulated Synchronous Generating System for Wind and Hydro Generators Izzat, Likaa Fahmi Ahmed,2013-01-01 In this work a developed model of brushless synchronous generator of wound rotor type is designed analyzed by FEM practically applied and investigated A comparison of results with conventional machines is also performed The presented machine can be applied for multi pole wind hydro generators or double poles diesel engine generators It is self excited by residual magnetism and a connected capacitor It is also self regulated by making use of fluctuations at load or limited speed changes The generated voltage may last at extended speed range by arranging a generating system with variable capacitance By eliminating the permanent magnets or advanced manufacturing technology of rotor poles and without using extra rotating external DC exciters an efficient excitation field and an output of flat self compensated compound characteristic are obtained More the feature of damper windings is determined Concerning the fact of environmental diminishing of elements in materials of permanent magnets and D C Battery the presented novel machine is hence a good alternative and more economic from generators exist in the market

Beside it is safer and highly recommended for power stability when connected to the grid
