Murphy,Prateep Kumar Nayak ,Alice Newton,2025-11-11 Interdisciplinary research spanning natural and social sciences and society is needed to inform decision making for sustainable use and conservation of marine resources and services The Integrated Marine Biosphere Research IMBeR project is an interdisciplinary global environmental change research network with the mission to Promote integrated marine research and enable capabilities for developing and implementing ocean sustainability options within and across the natural and social sciences and communicate relevant information and knowledge needed by society to secure sustainable productive and healthy oceans To achieve this mission the IMBeR science plan identifies three objectives which inform all IMBeR activities including the 2019 IMBeR Future Oceans2 open science conference

- 1 Understanding and quantifying the state and variability of marine ecosystems
- 2 Improving scenarios predictions and projections of future ocean human systems at multiple scales and
- 3 Improving and achieving sustainable ocean governance

This Research Topic welcomes submissions including perspective and opinion papers policy briefs original research articles and reviews related to any of the three interconnected IMBeR objectives These submissions could cover

- 1 the mechanisms of natural climate variability and anthropogenic global change and impacts on marine biogeochemical cycles species and ecosystems and human well being and livelihoods
- 2 modelling studies providing quantitative projections and predictions of future coupled human marine ecosystems including human well being and livelihoods governance processes and infrastructure at global regional and local scales
- 3 syntheses of integrated research

Consumer Debt and Social Exclusion in Europe Hans-W. Micklitz,Irina Domurath,2016-03-09 This book analyses the dichotomy between the goal of social inclusion and the effect of social exclusion through over indebtedness since 2008 in Europe Filling a vital gap in the current literature on the effects of the financial and economic crisis this volume puts into context academic discussion with the real life dimension of over indebtedness Reports from six European countries provide socio economic and legal information on over indebtedness as well as the regulatory and judicial responses to the problems entailed by over indebtedness They form the empirical background for five analyses of different aspects of the inclusion exclusion dichotomy It becomes clear that in the context of credit expansion individual over indebtedness has turned into a social issue which the current design of the consumer credit and mortgage system in Europe has helped to produce while disregarding the consequential danger of social exclusion Nonlinear Analysis in Neuroscience and Behavioral Research Tobias A. Mattei,2016-10-31 Although nonlinear dynamics have been mastered by physicists and mathematicians for a long time as most physical systems are inherently nonlinear in nature the recent successful application of nonlinear methods to modeling and predicting several evolutionary ecological physiological and biochemical processes has generated great interest and enthusiasm among researchers in computational neuroscience and cognitive psychology Additionally in the last years it has been demonstrated that nonlinear analysis can be successfully used to model not only basic cellular and molecular data but also complex cognitive processes and behavioral interactions The theoretical features of nonlinear systems such unstable periodic orbits period doubling bifurcations and phase space dynamics have already been successfully applied by several research groups to analyze the behavior of a variety of neuronal and cognitive processes Additionally the concept of strange attractors has lead to a new understanding of information processing which considers higher cognitive functions such as language attention memory and decision making as complex systems emerging from the dynamic interaction between parallel streams of information flowing between highly interconnected neuronal clusters organized in a widely distributed circuit and modulated by key central nodes Furthermore the paradigm of self organization derived from

the nonlinear dynamics theory has offered an interesting account of the phenomenon of emergence of new complex cognitive structures from random and non deterministic patterns similarly to what has been previously observed in nonlinear studies of fluid dynamics Finally the challenges of coupling massive amount of data related to brain function generated from new research fields in experimental neuroscience such as magnetoencephalography optogenetics and single cell intra operative recordings of neuronal activity have generated the necessity of new research strategies which incorporate complex pattern analysis as an important feature of their algorithms Up to now nonlinear dynamics has already been successfully employed to model both basic single and multiple neurons activity such as single cell firing patterns neural networks synchronization autonomic activity electroencephalographic measurements and noise modulation in the cerebellum as well as higher cognitive functions and complex psychiatric disorders Similarly previous experimental studies have suggested that several cognitive functions can be successfully modeled with basis on the transient activity of large scale brain networks in the presence of noise Such studies have demonstrated that it is possible to represent typical decision making paradigms of neuroeconomics by dynamic models governed by ordinary differential equations with a finite number of possibilities at the decision points and basic heuristic rules which incorporate variable degrees of uncertainty This e book has include frontline research in computational neuroscience and cognitive psychology involving applications of nonlinear analysis especially regarding the representation and modeling of complex neural and cognitive systems Several experts teams around the world have provided frontline theoretical and experimental contributions as well as reviews perspectives and commentaries in the fields of nonlinear modeling of cognitive systems chaotic dynamics in computational neuroscience fractal analysis of biological brain data nonlinear dynamics in neural networks research nonlinear and fuzzy logics in complex neural systems nonlinear analysis of psychiatric disorders and dynamic modeling of sensorimotor coordination Rather than a comprehensive compilation of the possible topics in neuroscience and cognitive research to which non linear may be used this e book intends to provide some illustrative examples of the broad range of
