Core-Task Design Leena Norros, Paula Savioja, Hanna Koskinen, 2022-06-01 This book focuses on design of work from the human factors (HF) perspective. In the approach referred to as Core Task Design (CTD), work is considered practice composed of human actors, the physical and social environment, and the tools used for reaching the actors' objectives. This book begins with consideration of an industrial case: the modernization of a nuclear power plant automation system and the related human system interfaces in the control room. This case illustrates generic design dilemmas that invite one to revisit human factors research methodology. Human factors should adopt practice as a new unit of analysis and should accept intervention as an inherent feature of its methodology. These suggestions are put into practice in the CTD approach according to which three general design functions are performed: those being understood to generalize empirical analysis of the work at hand, foresee the promise, creation of concepts for future work, and intervene to develop participatory development and design of work. For fulfillment of each of the design functions, several CTD methods are introduced. The methods are aimed at modeling the core task and analyzing how the actors actually take the core task features into account in order to achieve balance between potentially conflicting demands in action. Thereby, new understanding of the core task is acquired. Further methods focus on projecting the roles and functionality of technologies in the future work and on implementing changes to the work. Specific studies of the nuclear power plant's control room renewal constitute an example demonstrating a core task and the associated methods. We argue that the CTD approach offers clear utility for the design of future technology work and everyday services and environments. CTD utilizes achievements of practice theory in the social sciences to generate a creative synthesis of Cognitive Work Analysis, semiotic analysis of practice, and the cultural-historical theory of activity. Core Task Design facilitates dialogue among human factors experts, design engineers, and end users in their joint development of work. The intended audience of this book is students, researchers, and practitioners of human factors, industrial art and design, and instrumentation and control system design.
