Part 3 (Section 10.1)

Materials:

- Notebook
- "Biology - The Dynamics of Life" textbook

Instructions:

- Paste and complete today's handout in your notebook.
- Read pages 258 to 260 of your textbook and answer the following questions.
 1. In Mendel's experiments, some tall plants when crossed with each other, yielded only tall offspring. What were these plants called?
They were called the original P₁ true-breeding tall plants.
 2. Other tall plants, when crossed with each other, yielded both tall and short offspring. What are these plants called? Where did they come from?
These were the P₁ tall plants that come from a cross between a tall plant and a short plant.
 3. Two organisms can look alike but have underlying allele combinations. What do you call the way an organism looks and behaves? What do you call the allele combination that an organism contains?
The way an organism looks and behaves is called its phenotype. The allele combination an organism contains is known as its genotype.
 4. What is the genotype of a tall plant that has two alleles for tallness? What are the possible genotypes for a plant whose phenotype is tall?
The genotype of a tall plant that has two alleles for tallness is TT. The possible genotypes for a plant whose phenotype is tall, are TT and Tt.
 5. Can an organism's exact genotype be known only by its phenotype? Please explain your answer.
An organism's genotype can't be always known by its phenotype. For example, a plant with a tall phenotype could have either a TT or Tt genotype.

Statistics is strongly tied to applications in different scientific disciplines and the most challenging statistical problems arise from problems in the sciences In fact the most innovative statistical research flows from the needs of applications in diverse settings This volume is a testimony to the crucial role that statistics plays in scientific disciplines such as genetics and environmental sciences among others The articles in this volume range from human and agricultural genetic DNA research to carcinogens and chemical concentrations in the environment and to space debris and atmospheric chemistry Also included are some articles on statistical methods which are sufficiently general and flexible to be applied to many practical situations The papers were refereed by a panel of experts and the editors of the volume The contributions are based on the talks presented at the Workshop on Statistics and the Sciences held at the Centro Stefano Franscini in Ascona Switzerland during the week of May 23 to 28 1999 The meeting was jointly organized by the Swiss Federal Institutes of Technology in Lausanne and Zurich with the financial support of the Minerva Research Foundation As the presentations at the workshop helped the participants recognize the potential role that statistics can play in the sciences we hope that this volume will help the reader to focus on the central role of statistics in the specific areas presented here and to extrapolate the results to further applications **Essential Genetics** Daniel Hartl, 2011 Updated to reflect the latest discoveries in the
