Tracking the Wanders of Nature Clas Veibäck, 2018-11-20 Target tracking is a mature topic with over half a century of mainly military and aviation research The field has lately expanded into a range of civilian applications due to the development of cheap sensors and improved computational power With the rise of new applications new challenges emerge and with better hardware there is an opportunity to employ more elaborated algorithms There are five main contributions to the field of target tracking in this thesis Contributions I IV concern the development of non conventional models for target tracking and the resulting estimation methods Contribution V concerns a reformulation for improved performance To show the functionality and applicability of the contributions all proposed methods are applied to and verified on experimental data related to tracking of animals or other objects in nature In Contribution I sparse Gaussian processes are proposed to model behaviours of targets that are caused by influences from the environment such as wind or obstacles The influences are learned online as a part of the state estimation using an extended Kalman filter The method is also adapted to handle time varying influences and to identify dynamic systems It is shown to improve accuracy over the nearly constant velocity and acceleration models in simulation The method is also evaluated in a sea ice tracking application using data from a radar on Svalbard In Contribution II a state space model is derived that incorporates observations with uncertain timestamps An example of such observations could be traces left by a target Estimation accuracy is shown to be better than the alternative of disregarding the observation The position of an orienteering sprinter is improved using the control points as additional observations In Contribution III targets that are confined to a certain space such as animals in captivity are modelled to avoid collision with the boundaries by turning The proposed model forces the predictions to remain inside the confined space compared to conventional models that may suffer from infeasible predictions In particular the model improves robustness against occlusions The model is successfully used to track dolphins in a dolphinarium as they swim in a basin with occluded sections In Contribution IV an extension to the jump Markov model is proposed that incorporates observations of the mode that are state independent Normally the mode is estimated by comparing actual and predicted observations of the state However sensor signals may provide additional information directly dependent on the

mode Such information from a video recorded by biologists is used to estimate take off times and directions of birds captured in circular cages The method is shown to compare well with a more time consuming manual method In Contribution V a reformulation of the labelled multi Bernoulli filter is used to exploit a structure of the algorithm to attain a more efficient implementation Modern target tracking algorithms are often very demanding so sound approximations and clever implementations are needed to obtain reasonable computational performance The filter is integrated in a full framework for tracking sea ice from pre processing to presentation of results

egna forskningsbidrag och lösningar för en handfull specifika problem och tillämpningar. Det fjärde projektet som presenteras är ett samarbete med Kolmårdens djurpark. Biologer i djurparken studerar delfinernas beteende i fängenskap. I dagsläget markerar studenter för hand i video var delfinerna befinner sig i bassängen. Med mätljning samlas djurens positioner in automatiskt utan möjlig inblandning. Det femte bidraget i forskningen är utvecklingen av en modell för hur delfinerna rör sig i bassängen. Det andra projektet som presenteras är ett samarbete med biologer vid Lunds universitet som studerar beteendet hos flyttglar. I en metod från 60-talet mättes flyglarnas rörelser i en trätt. Från rapporten i trätten som orsakats vid flyglarnas lyftfärs k analyserar man riktningarna för flyttfärsken. Med videokamera och mätljning samlas djurens positioner in och enskilda lyftfärs k detekteras automatiskt. Det femte bidraget i forskningen är en metod för att bättre utnyttja information från videon till att detektera lyftfärsken. Det tredje projektet som presenteras är ett samarbete med Smarta Savanner. En id som utforskas är möjligheten att använda parkvakternas vittnesmål om spår för när noshörningar för att förbättra mätljningen ena sidan är data från videokameror och radarer väldigt noggranna i tid men relativt osäkra i de uppmätta positionerna andra sidan kan positionen för ett spår mätas noggrant samtidigt som det ofta är svårt att avgöra när noshörningen var på platsen. Genom att utnyttja informationen från båda källorna kan noshörningars röflyttningar i parken kartläggas bättre. Den bakomliggande teorin för observationer med osäker tid inom mätljning är relativt outforskad. Det femte bidraget i forskningen är utvecklingen av en metod för att utnyttja sådana observationer. Enkla simulerade fall används för att analysera metoden. Metoden utvärderas även i en tillämpning för att förbättra den satellitbaserade positionsbestämningen av en orienterare genom att noggrant mäta positionen på kontrollerna. Det fjärde projektet som presenteras är ett samarbete med Norges teknisk-naturvetenskapelige universitet NTNU och Norut i Norge som samlat in radardata på Svalbard. Det femte bidraget är utvecklandet av en metod som lär sig hur lokala strömmar och vindar påverkar drivisen för att bättre kunna förutsäga rörelser. Ett annat bidrag i forskningen är en förklaring av formuleringen och implementationen av en modern algoritm för mätljning. Projektet som alla har flera likheter och skillnader med varandra kan gemensamt sammanfattas med att de spårar rörelser eller vandringar i naturen.

Handbook of Parent-Child Interaction Therapy Larissa N. Niec, 2018-11-10. This handbook examines advances in the evidence-based behavioral family intervention parent-child interaction therapy PCIT. It surveys innovative adaptations tailored to specific diagnostic concerns, client populations, treatment settings, and delivery formats. Chapters provide rationales for adaptation, reviews of relevant research, and discussions of advantages and challenges. Case studies illustrate the implementation of the adaptations and help to make new techniques concrete. The handbook offers practical descriptions of the adaptations to PCIT, comprehensively reviews treatment outcome literature, and integrates cutting-edge implementation science into an exploration of the current dissemination strategies in PCIT. The handbook concludes with a consideration of the questions that remain to be addressed to extend the reach of PCIT among traditionally underserved families and to continue to advance the science and practice of children's mental health interventions. Featured topics include
