Just Security in an Undergoverned World William J. Durch,Joris Larik,Richard Ponzio,2018 Just Security in an Undergoverned World examines how humankind can manage global problems to achieve both security and justice in an age of antithesis Global connectivity is increasing visibly and invisibly in trade finance culture and information helping to spur

economic growth technological advance and greater understanding and freedom but global disconnects are growing as well Ubiquitous electronics rely on high value minerals scraped from the earth by miners kept poor by corruption and war People abandon burning states for the often indifferent welcome of wealthier lands whose people in turn draw into themselves Humanity's very success underwritten in large part by lighting up gigatons of long buried carbon for 200 years now threatens humanity's future The global governance institutions established after World War Two to manage global threats especially the twin scourges of war and poverty have expanded in reach and impact while paradoxically losing the political support of their wealthiest and most powerful members Their problems mimic those of their members in struggling to adapt to new problems and maintain trust in institutions This volume argues however that a properly mandated managed and modernized global architecture offers unparalleled potential to midwife solutions to vexing issues that transcend borders and capacities of individual actors from conflict and climate change to poverty and pandemic disease The volume offers just security as a new framework for evaluating innovative solutions and strategies for institutional reform **Supporting Investment in Knowledge Capital, Growth and Innovation** OECD,2013-10-10 This work shows that business investment in knowledge based capital is a key to future productivity growth and living standards and sets out recommendations in the fields of innovation taxation entrepreneurship and business development corporate reporting big data competition and measurement **Energy Efficiency in Buildings** José Manuel Andújar,Sergio Gómez Melgar,2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO₂ per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed **ACCA Paper P4 - Advanced Financial Management Practice and revision kit** BPP Learning Media,2013-01-01 The examiner reviewed P4 Practice Revision Kit provides invaluable guidance on how to approach the exam Questions are grouped by key topic areas and integrated where appropriate Three mock examinations provide ample opportunity to practise questions and marking schemes show you how the examiner awards marks
