

Chapter 11 & 12 Study Guide: Motion & Forces

Chapter 11: Motion

1. Define (include the formula and circle diagram for calculating speed, velocity, and acceleration):
 - a. Distance: The length between two objects or the length of the path traveled.
 - b. Speed: distance traveled by the time it took to travel. $\text{Speed} = \text{distance} / \text{time}$
 - c. Velocity: distance traveled by the time it took to travel and the direction that you travelled in. $\text{velocity} = \text{distance} / \text{time}$
 - d. Acceleration: change in velocity or velocity over time. $\text{acceleration} = \frac{\text{velocity}_{\text{final}} - \text{velocity}_{\text{initial}}}{\text{time}}$
2. What is the speed of an object at rest? *Zero m/s*
3. The difference between speed and velocity is that velocity includes *direction*.
4. The SI unit for distance is *meter (m)*
5. The SI unit for speed or velocity is *meter per second (m/s)*.
6. The SI unit for acceleration is *meter per second squared (m/s²)*
7. On a *distance-time* graph, what does the slope tell you? *Speed or velocity*
8. On a *speed-time* graph, what does the slope tell you? *acceleration*

Chapter 12: Forces

9. Describe (what does it say and what is it commonly called)
 - a. Newton's First law of Motion: *Law of Inertia*. Object in motion stays in motion or an object at rest stays at rest UNLESS acted on by a **FORCE**.
 - b. Newton's Second law of Motion: $F=ma$. Force equals the product of an object's mass and *acceleration*. (or Acceleration is equal to the force and inversely proportional to mass)
 - c. Newton's Third law of Motion: *Action/Reaction Law*. For every action there is an equal and *opposite reaction*.
10. Give an **example for each** of Newton's laws
 - a. Newton's First law of Motion: *bolder won't move unless something pushes on it, and the moon won't stop rotating unless a force acts on it.*
 - b. Newton's Second law of Motion *it takes more force to accelerate a school bus than a toy car.*
 - c. Newton's Third law of Motion: *my foot pushed on the ball (action force), the ball pushes back (reaction force) and fly's forward (resulting net force). OR you sitting in the desk is pushing down on the desk and the desk is pushing up on you but they are balanced so no CHANGE in motion.*
11. Define and give an example of each of the following terms.

Definition	Example
a. Friction: <i>force that opposes motion</i>	a. Friction: <i>heat when rubbing hands together.</i>
b. Static Friction: <i>friction that prevents object from moving</i>	b. Static Friction: <i>Pushing against dresser that won't move</i>
c. Sliding Friction: <i>friction that occurs between objects sliding past each other.</i>	c. Sliding Friction: <i>going down a slide, dresser sliding across the floor.</i>
d. Rolling Friction: <i>friction that occurs between object rolling against another object.</i>	d. Rolling Friction: <i>roller skates on pavement.</i>
e. Fluid Friction: <i>friction that occurs in a fluid (Example of Fluid: water, quick sand, air...)</i>

Reading Physics Jae Jun Kim,2023-03-27 This book was written to help college students understand physics without complicated math Each year thousands of college students pursuing business and humanities degrees find themselves taking a course in introductory physics But many will have serious trouble solving physics problems because they do not have enough experience using mathematical equations Understanding physics is challenging without a strong math background but not impossible Unlike other introductions to physics this book explains the basic concepts in classical mechanics with a minimal amount mathematical expressions so new students can spend their time learning physics not math The result is not only a better understanding of physics but possibly a better grade This study guide covers the three aspects of classical mechanics basics of motion rules for gravitational interaction among two or more objects and rotational motion The bottom line is that this book was written to help students better understand the mathematical parts of undergraduate classical mechanics so they can concentrate on learning physics not math WORD OF PRAISE Sooner or later we all realize that physics lies at the foundations of all science and to understand the world around us we must know some physics But we are not all fond of math so what to do Read this book It will help you understand the basics of motion which is where all physics begins without any mathematics at all Simply explained in simple prose the ideas shine through for anyone to grasp Highly recommended Milind Purohit Dean Okinawa Institute of Science and Technology Former Dept Chair Physics Astronomy Univ of South Carolina Laboratory Manual and Study Guide, Physical Science for Progress Milton O.
