Study Guide

Chapter 2: PPP

2.0. 1	What is PPP?	A Wan Technology that is used to connect LANs to service provider WANs, and to connect LAN segments within an Enterprise network.
	A LAN-to-WAN point-to-point connection is also referred to as a _____ or, _____ because the lines are leased from a carrier (usually a telephone company) and are dedicated for use by the company leasing the lines.	Serial connection, leased-line connection
2.1. 1	Describe Serial and Parallel communication.	serial connection, information is sent across one wire, one data bit at a time. parallel connection sends the bits over more wires simultaneously
	What if any are the benefits of serial vs. parallel communication?	The most significant advantage is simpler wiring.
	Describe the three key serial communication standards affecting LAN-to-WAN connections.	RS-232 - Most serial ports on personal computers conform to the RS-232C or newer RS-422 and RS-423 standards. V.35 - Typically used for modem-to-multiplexer communication, this ITU standard for high-speed, synchronous data exchange combines the bandwidth of several telephone circuits. HSSI - A High-Speed Serial Interface (HSSI) supports transmission rates up to 52 Mb/s. Engineers use HSSI to connect routers on LANs with WANs over high-speed lines such as T3 lines.
2.1. 2	Describe TDM.	Time Division Multiplexing - TDM divides the bandwidth of a single link into separate channels or time slots.
	Describe the principle used in synchronous TDM.	TDM increases the capacity of the transmission link by slicing time into smaller intervals so that the link carries the bits from multiple input sources, effectively increasing the number of bits transmitted per second.
	What is the purpose of the MUX?	A multiplexer (MUX) at the transmitter accepts the separate signals.
	What is a data stream?	All data transmitted through a communications line in a single read or write operation.
	What is Statistical Time Division Multiplexing?	STDM uses a variable time slot length allowing channels to compete for any free slot space. channels using this scheme. STDM requires each transmission to carry identification information (a channel identifier).
