The Oxford Guide to Financial Modeling Thomas S. Y. Ho, Sang-bin Yi, 2004 The essential premise of this book is that theory and practice are equally important in describing financial modeling In it the authors try to strike a balance in their discussions between theories that provide foundations for financial models and the institutional details that provide the context for applications of the models The book presents the financial models of stock and bond options exotic options investment grade and high yield bonds convertible bonds mortgage backed securities liabilities of financial institutions the business model and the corporate model It also describes the applications of the models to corporate finance Furthermore it relates the models to financial statements risk management for an enterprise and asset liability management with illiquid instruments The financial models are progressively presented from option pricing in the securities markets to firm valuation in corporate finance following a format to emphasize the three aspects of a model the set of assumptions the model specification and the model applications Generally financial modeling books segment the world of finance as investments financial institutions corporate finance and securities analysis and in so doing they rarely emphasize

the relationships between the subjects This unique book successfully ties the thought processes and applications of the financial models together and describes them as one process that provides business solutions Created as a companion website to the book readers can visit www.thomasho.com to gain deeper understanding of the book's financial models Interested readers can build and test the models described in the book using Excel and they can submit their models to the site Readers can also use the site's forum to discuss the models and can browse server based models to gain insights into the applications of the models For those using the book in meetings or class settings the site provides Power Point descriptions of the chapters Students can use available question banks on the chapters for studying

Planning with the semi-input-output method A. Kuyenhoven, 2012-12-06 The semi input output method was introduced by Professor Jan Tinbergen in the early 1960's in fairly obscure places in the economic literature The basic idea of the method is a very simple one and does not require lengthy and sophisticated exposition to be understood This fact together perhaps with Tinbergen's dislike for very formalized and technical analysis probably explains why he himself has never given a full exposition and elaboration of this method Nevertheless the concept did not remain unnoticed and authors such as B Hansen and some of Tinbergen's collaborators in particular P A Cornelisse and J Versluis have contributed to the elaboration of the method The present work by Dr A Kuyenhoven also a long time collaborator of Tinbergen has provided us with the first full and in my opinion definite exposition of the nature technique and use of the semi input output method now more than 15 years after the launching of the concept
