Accounting Value Equation Spin:

Schrödinger Equations in Nonlinear Systems Wu-Ming Liu, Emmanuel Kengne, 2019-03-20 This book explores the diverse types of Schrödinger equations that appear in nonlinear systems in general with a specific focus on nonlinear transmission networks and Bose Einstein Condensates In the context of nonlinear transmission networks it employs various methods to rigorously model the phenomena of modulated matter wave propagation in the network leading to nonlinear Schrödinger NLS equations Modeling these phenomena is largely based on the reductive perturbation method and the derived NLS equations are then used to methodically investigate the dynamics of matter wave solitons in the network In the context of Bose Einstein condensates BECs the book analyzes the dynamical properties of NLS equations with the external potential of different types which govern the dynamics of modulated matter waves in BECs with either two body interactions or both two and three body interatomic interactions It also discusses the method of investigating both the well posedness and the ill posedness of the boundary problem for linear and nonlinear Schrödinger equations and presents new results Using simple examples it then illustrates the results on the boundary problems For both nonlinear transmission networks and Bose Einstein condensates the results obtained are supplemented by numerical calculations and presented as figures

Quantum Theory of Polymers as Solids Janos J. Ladik,2012-12-06 The goal of this monograph is to summarize the different quantum mechanical methods developed in the last 20 years to treat the electronic structure of polymers Owing to the nature of the problem these methods consist of a mixture of quantum chemical and solid state physical tech niques The theory described in Part I treats besides the Hartree Fock problem the electron correlation and it has also been developed for disordered polymeric systems Though for obvious reasons the book could not include all the existing calculations each new method des cribed is illustrated by a few applications with a discussion of the numerical results obtained Far more details see the Introduction to Part I The second part contains the theoretical calculation of different properties of polymers based on the methods systematically introduced in the first part The properties

calculated include the electronic and vibrational spectra of polymers and the computation of their transport magnetic and mechanical properties In cases where reliable experimental data are available the theoretical results are compared with them

Electron and Nuclear Spin Dynamics in Semiconductor Nanostructures M. M. Glazov, 2018 This book focuses on the main aspects of electron and nuclear spin dynamics in semiconductor nanostructures It summarizes main results of theoretical and experimental studies of interactions in spin systems effects of ultrafast spin manipulation by light phenomena of spin losses and the physics of the omnipresent spin noise
