The Politics of Green Transformations Ian Scoones, Melissa Leach, Peter Newell, 2015-01-09 Multiple green transformations are required if humanity is to live sustainably on planet Earth. Recalling past transformations, this book examines what makes the current challenge different and especially urgent. It examines how green transformations must take place in the context of the particular moments of capitalist development and in relation to particular alliances. The role of the state is emphasised both in terms of the type of incentives required to make green transformations politically feasible and the way states must take a developmental role in financing innovation and technology for green transformations. The book also highlights the role of citizens as innovators, entrepreneurs, green consumers and members of social movements. Green transformations must be both top down involving elite alliances between states and business but also bottom up pushed by grassroots innovators and entrepreneurs and part of wider mobilisations among civil society. The chapters in the book draw on international examples to emphasise how contexts matter in shaping pathways to sustainability. Written by experts in the field, this book will be of great interest to researchers and students in environmental studies, international relations, political science, development studies, geography and anthropology as well as policymakers and practitioners concerned with sustainability.

The Oxford Handbook of International Trade Law, 2022-11-17 The rules and regulations governing international trade have grown at an exponential rate in the years since the Uruguay Round agreements established the WTO in 1995. These agreements continue to act as the multilateral foundation of the body of law which is being expanded by its own committees and in new arrangements. As the international trade law system grows, it comes under increasing scrutiny from scholars, government officials and trade law practitioners. It raises questions about the overlap with other international legal, political and economic regimes. This Handbook considers the system of international trade law and what it means for States, for economic systems, for other international regimes, for civil society and for human welfare. The book opens by focusing on the regulation of international trade, considering the history, economics and sources of international trade law as well as the possibilities for the future. It considers the intersection of international trade law with States, the economic and institutional context of the world trading system, the framework of its substantive law and the balance of trade objectives versus ethical responsibilities. The book concludes by offering analysis of new trade law developments in the agricultural, digital and financial sectors as well as outlining the settlement of trade law disputes both in the WTO and bilateral regional trade agreements. The second edition broadens the scope of analysis beyond the WTO, analysing regional trade agreements and preferential trade arrangements including the Trans Pacific Partnership and Canada EU Trade Agreement. The new edition also considers developments within the WTO such as in the area of agricultural export subsidies and the Trade Facilitation Agreement.

Sustainable Governance in Hybrid Organizations Linne Marie Lauesen, 2016-03-03 In *Sustainable Governance in Hybrid Organizations*, the author Linne Marie Lauesen explores how businesses that have succeeded in

conducting sustainable governance manage and govern their sustainable performance in other words how they manage to be economically socially and environmentally sustainable In this respect hybrid organizations that are formed as businesses with a mission to be sustainable and to provide services for society such as water companies are a good point of departure Water companies are highly regulated whilst working primarily for the betterment of society and on behalf of generations to come for whom clean and plentiful water and the preservation of nature is a must Linne Marie has dug deep into these types of hybrid organizations in order to reveal which mechanisms of organizational governance for sustainability are at play and how these organizations manage to balance their triple bottom lines in order to survive financially socially and environmentally and make a business out of their conduct Balancing these three bottom lines in a sustainable way is explained in a clear and accessible way and the juxtaposition between non profit and for profit water companies will show how this model can be transferred to other business spheres

Revolutionary Emotions Assistant Professor of Political Science Silvana Toska, 2024-10-25 For centuries revolutionaries have spoken of the emotional arousal that motivated them to revolt Studies of revolutions however rarely give these emotional narratives the power that actors themselves recount This book argues that revolutionary waves from 1848 to the present cannot be explained without the emotions that motivated potential revolutionaries to imitate revolts in neighboring states The shared identity of revolutionaries across borders leads to a shared emotional arousal and adoption of protest frames and methods By grounding the theory in revolutionaries emotional narratives and breaking down the dichotomies that plague revolution research structure agency domestic international Revolutionary Emotions provides a powerful new theory of revolutionary diffusion and success

Liquidity Lost Paul Langley, 2015 The interventions of crisis management during the 2007 to 2011 financial crisis were not simply responses to a set of given developments in markets banking or neo liberal capitalism Nor can those interventions be adequately explained as the actions of sovereign state officials and institutions Instead Langley argues processes of crisis governance are shown to have established six principal technical problems to be acted upon liquidity toxicity solvency risk regulation and debt and that the governance of these technical problems is shown to have been strategically assembled in order to secure the continuation of a particular financialized way of life that depends upon global financial circulations Contributing to interdisciplinary debates in cultural economy and the social studies of finance and grounded in extensive empirical research this book offers an innovative analysis of how the contemporary global financial crisis was governed Through an exploration of the interventions made by central banks treasuries and regulatory authorities in the Anglo American heartland of the crisis between 2007 and 2011 experimental and strategic apparatuses of crisis governance are shown to have emerged These discrete apparatuses established the six technical problems to be acted upon but also shared certain proclivities and preferences Crisis governance assembled discourses and devices of economy in relation with sovereign monetary fiscal and regulatory techniques and elicited an affective atmosphere of confidence It also sought to secure the financialized way of life which turns on the opportunities ostensibly afforded by uncertain financial circulations and gave rise to post crisis technical fixes designed to advance the resilience of banking and the macro prudential regulation of financial stability Thus the consensus that prevails across economics political economy and beyond wherein sovereign state institutions are cast as coming to the rescue of the markets banking or neo liberal capitalism conceals a great deal more than it reveals about the governance of the global financial crisis

Beyond GDP Matthew Kuperus Heun, Michael Carbajales-Dale, Becky Roselius Haney, 2015-05-11 This book uses the metaphor The economy is society's metabolism as a springboard to develop a rigorous theoretical framework for a better system of national accounts which goes Beyond GDP and is relevant to the age of resource depletion Society is entering a new era in which biophysical limits related to natural resource extraction rates and the biosphere's waste assimilation capacity are becoming binding constraints on mature economies Unfortunately the data needed for policy makers to understand and manage economic

growth in this new era are not universally available All stakeholders need a new way to understand our economy in the context of the biosphere's ability to provide essential natural capital and we suggest that detailed information about materials energy embodied energy and energy intensity should be routinely gathered analyzed and disseminated from a centralized location to provide markets and policymakers with a more comprehensive understanding of the biophysical economy However a firm theoretical foundation is needed before proceeding along this new path which this book is intended to provide After arguing that the stock of manufactured capital is an important driver of material and energy demands imposed upon the biosphere a new accounting framework is derived from the laws of thermodynamics to reflect the fact that material and embodied energy accumulate within the capital stock of economic sectors This framework extends the Energy Input Output EIO techniques first developed by Bullard Herendeen and others to estimate energy intensity of economic products Implications from the new framework are discussed including the value of economic metrics for policy making the need for physically based rather than product based EIO formulations a re assessment of the concept of economic growth and an evaluation of recycling reuse and dematerialization The framework also provides an opportunity to assess an array of definitions for Daly's steady state economy in relation to the ideal of a sustainable economy The book ends with a list of steps to be taken in creating a more comprehensive system of national accounts National accounting agencies worldwide should develop and maintain balance sheets of both natural and manufactured capital in addition to national income statements All stocks and inter sector flows should be provided in physical as well as financial units In the US the Bureau for Economic Analysis BEA should restart detailed Capital Labor Energy Material and Services KLEMS reporting National accounting agencies should routinely estimate the energy intensity of economic products and all of the above should be estimated and disseminated on an annual basis

Mügge, 2016-03-31 In the years leading up to the global financial crisis the European Union EU had emerged as a central actor in global financial governance almost rivalling the United States in influence While the USA and the EU continue to dominate financial rule setting in the post crisis world the context in which they do so has changed dramatically Pre crisis ideas about laissez faire regulation have been discarded in favour of more interventionist ones The G20 and the Financial Stability Board have been charged with stronger coordination of global efforts At the same time jurisdictions have re-emphasized the need to get their own regulatory house in order before committing to further global harmonization And through banks failures and massive bail outs the financial sector hitherto a driving force behind the cross border integration of finance has been reconfigured This book asks a straightforward question what have these and other key post crisis trends in global finance done to the position that the European Union occupies in it The contributions to this book analyse the link between financial governance in the European Union and on the global level from diverse theoretical angles and they cover the main issues that will shape the future European role on the global regulatory stage This book was published as a special issue of the Journal of European Public Policy
