Animal Physiology Hill Wyse And Anderson:

Animal Physiology Richard W. Hill, Margaret Anderson, 2016-04-01 Animal Physiology Fourth Edition presents all the branches of modern animal physiology with a strong emphasis on integration of physiological knowledge ecology and evolutionary biology

Animal Physiology Richard W. Hill, Daniel Cavanaugh, Margaret Anderson, 2021-10 Comprehensive contemporary and engaging Animal Physiology provides evolutionary and ecological context to help students make connections across all levels of physiological scale

Principles of Veterinary Animal Physiology Tanmoy Rana, 2025-10-22 This textbook for advanced graduate and postgraduate veterinary students introduces animal behaviour offering insights into its origins cognitive aspects communication environmental influences biological mechanisms complex behaviours adaptive strategies and practical applications The initial chapters present fundamental principles underpinning animal behaviour elucidating the roles of evolution genetics and ecology Subsequent chapters introduce the role of natural selection habitat selection and pheromones alongside exploring conflicts predator prey dynamics and the impact of domestication on behaviour The book further delves into topics such as habitat selection foraging strategies predator prey dynamics and the effects of domestication on behaviour It unravels the mysteries of animal defences altruism social dominance territoriality and the finely tuned art of food and habitat selection Additionally it covers the biological mechanisms governing behaviour unearthing the roles played by neuroendocrinology biological clocks and genetics Towards the end the textbook examines the practical relevance of behavioural insights in veterinary science

Key Features Offers a comprehensive exploration of animal behaviour encompassing a wide range of topics from evolutionary principles to intricate behavioural patterns Provides understanding of the origins of animal behaviour including the roles of evolution genetics and ecology Highlights the practical applications of behavioural insights in veterinary science and related fields Delves into specialized areas of animal behaviour such as innate behaviours animal memory pheromones and cooperation Explores how animals adapt to their environments covering topics like foraging behaviour predator detection and self defensive behaviours Addresses the impact of environmental factors hormones and drugs on behaviour offering a holistic view of animal responses to their surroundings

Oxidative Stress and Hormesis in Evolutionary Ecology and Physiology David Costantini, 2014-03-27 This book discusses oxidative stress and hormesis from the perspective of an evolutionary ecologist or physiologist In the first of ten chapters general historical information definitions and background of research on oxidative stress physiology hormesis and life history are provided Chapters 2 10 highlight the different solutions that organisms have evolved to cope with the oxidative threats posed by their environments and lifestyles The author illustrates how oxidative stress and hormesis have shaped diversity in organism life histories behavioral profiles morphological phenotypes and aging mechanisms The book offers fascinating insights into how organisms work and how they evolve to sustain their physiological functions under a vast array of environmental conditions

Ecological Physiology of Daily Torpor and Hibernation

Fritz Geiser, 2021-08-23 This book provides an in depth overview on the functional ecology of daily torpor and hibernation in endothermic mammals and birds The reader is well introduced to the physiology and thermal energetics of endothermy and underlying different types of torpor Furthermore evolution of endothermy as well as reproduction and survival strategies of heterothermic animals in a changing environment are discussed Endothermic mammals and birds can use internal heat production fueled by ingested food to maintain a high body temperature As food in the wild is not always available many birds and mammals periodically abandon energetically costly homeothermic thermoregulation and enter an energy conserving state of torpor which is the topic of this book Daily torpor and hibernation multiday torpor in these heterothermic endotherms are the most effective means for energy conservation available to endotherms and are characterized by pronounced temporal and controlled reductions in body temperature energy expenditure water loss and other physiological functions Hibernators express multiday torpor predominately throughout winter which substantially enhances winter survival In contrast daily heterotherms use daily torpor lasting for several hours usually during the rest phase some throughout the year Although torpor is still widely considered to be a specific adaptation of a few cold climate species it is used by many animals from all climate zones including the tropics and is highly diverse with about 25 50% of all mammals but fewer birds estimated to use it While energy conservation during adverse conditions is an important function of torpor it is also employed to permit or facilitate energy demanding processes such as reproduction and growth especially when food supply is limited Even migrating birds enter torpor to conserve energy for the next stage of migration whereas bats may use it to deal with heat Even though many heterothermic species will be challenged by anthropogenic influences such as habitat destruction introduced species novel pathogens and specifically global warming not all are likely to be affected in the same way In fact it appears that opportunistic heterotherms because of their highly flexible energy requirements ability to limit foraging and reduce the risk of predation and often pronounced longevity may be better equipped to deal with anthropogenic challenges than homeotherms In contrast strongly seasonal hibernators especially those restricted to mountain tops and those that have to deal with new diseases that are difficult to combat at low body temperatures are likely to be adversely affected This book addresses researchers and advanced students in Zoology Ecology and Veterinary Sciences *The Hidden Mechanics of Exercise* Christopher M. Gillen, 2014-03-17 The Hidden Mechanics of Exercise reveals the microworld of the body in motion from motor proteins that produce force to enzymes that extract energy from food and tackles questions athletes ask What should we ingest before and during a race How does a hard workout trigger changes in our muscles Why does exercise make us feel good **Free Radicals and Diseases** Rizwan Ahmad, 2016-10-26 The current volume entitled Free Radicals and Diseases integrates knowledge in free radical associated diseases from the basic level to the advanced level and from the bench side to bed side The chapters in this book provide an extensive overview of the topic including free radical formations and clinical interventions Engineering Animals Mark Denny, Alan McFadzean, 2011-09-09 From an engineer s perspective

how do specialized adaptations among living things really work Writing with wit and a richly informed sense of wonder Denny and Alan offer an expert look at animals including humans as works of evolutionary engineering each exquisitely adapted to a specific manner of survival Handbook of Meat and Meat Processing, Second Edition Y. H. Hui, 2012-01-11 Retitled to reflect expansion of coverage from the first edition Handbook of Meat and Meat Processing Second Edition contains a complete update of materials and nearly twice the number of chapters Divided into seven parts the book covers the entire range of issues related to meat and meat processing from nutrients to techniques for preservation and extending shelf life Topics discussed include An overview of the meat processing industry The basic science of meat with chapters on muscle biology meat consumption and chemistry Meat attributes and characteristics including color flavor quality assessment analysis texture and control of microbial contamination The primary processing of meat including slaughter carcass evaluation and kosher laws Principles and applications in the secondary processing of meat including breeding curing fermenting smoking and marinating The manufacture of processed meat products such as sausage and ham The safety of meat products and meat workers including sanitation issues and hazard analysis Drawn from the combined efforts of nearly 100 experts from 16 countries the book has been carefully vetted to ensure technical accuracy for each topic This definitive guide to meat and meat products it is a critical tool for all food industry professionals and regulatory personnel

The Role of Organismal Oxidative Stress in the Ecology and Life-History Evolution of Animals David Costantini, 2024-09-09 This book illustrates the role of cellular oxidative stress as one of the most important physiological cornerstones in the evolution of biodiversity The first part of the book provides the fundamentals to navigate the field and analyse the cross talk between oxidative status homeostasis and other fundamental organismal functions such as immunity and stress physiology The second part of the book argues that oxidative stress underpins the astonishing diversity of adaptations to the environments and the evolution of life history strategies from growth to reproduction Unravelling the unexpected ways through which the need of regulating the organismal oxidative status has influenced the evolution of life this book presents a novel integrative way of thinking about how a cellular mechanism has shaped the evolution of life and death
