Comparative Biochemistry V1 Marcel Florkin, 2012-12-02 *Comparative Biochemistry A Comprehensive Treatise Volume I* Sources of Free Energy focuses on the desire to provide a sound critical and provocative summary of knowledge in comparative biochemistry including thermodynamics biological systems oxidation visual systems and aerobic and anaerobic reactions of inorganic substances The selection first offers information on the introduction to comparative biochemistry and thermodynamics of living systems Discussions focus on comparative point of views in biology and biochemistry classical thermodynamics reaction rates in chemical and biological systems and thermodynamics of open systems The text then ponders on comparative mechanisms for fatty acid oxidation phosphoric acid anhydrides and other energy rich compounds and onium compounds and their biological significance The publication examines phototropism and phototaxis and distribution and evolution of visual systems Topics include phototropism in plants analysis of phototropic reaction nature of photoreceptors role of auxin in phototropism of plants visual systems of vertebrates and habitat relations The book also tackles aerobic and anaerobic reactions of inorganic substances and comparative biochemistry of glycolysis The selection is a dependable source of data for readers interested in the sources of free energy

Comparative Biochemistry V6 Marcel Florkin, 2012-12-02 *Comparative Biochemistry A Comprehensive Treatise Volume VI* Cells and Organisms focuses on the complex composition of cells and organisms The book opens with discussions on the biochemistry of morphogenesis Bacterial germination and sporulation seed germination egg development of sea urchins sporulation of cellular slime mold and amphibian differentiation are described The volume looks at the comparative aspects of metabolic control biochemical basis of chemical needs biochemistry of insect metamorphosis and hormones in invertebrates The text also highlights the presence of protein hormones in vertebrates The differences between neurohypophyseal and melanocorticotrophic hormones are identified The book ends with discussions on the comparative biochemistry of digestive mechanisms and detoxication Digestion in special physiological and systematic groups of vertebrates carnivorous plants and invertebrates detoxication and adoption of terrestrial habitat and the developmental aspects of detoxication are discussed The book is a good source of data for readers wanting to explore the complex composition of organisms and cells

Evolutionary Developmental Biology Brian K. Hall, 1998-09-30 Although evolutionary developmental biology is a new field its origins lie in the last century the search for connections between embryonic development ontogeny and evolutionary change phylogeny has been a long one Evolutionary developmental biology is however more than just a fusion of the fields of developmental and evolutionary biology It forges a unification of genomic developmental organismal population and natural selection approaches to evolutionary change It is concerned with how developmental processes evolve how evolution produces novel structures functions and behaviours and how development evolution and ecology are integrated to bring

about and stabilize evolutionary change The previous edition of this title published in 1992 defined the terms and laid out the field for evolutionary developmental biology This field is now one of the most active and fast growing within biology and this is reflected in this second edition which is more than twice the length of the original and brought completely up to date There are new chapters on major transitions in animal evolution expanded coverage of comparative embryonic development and the inclusion of recent advances in genetics and molecular biology The book is divided into eight parts which place evolutionary developmental biology in the historical context of the search for relationships between development and evolution detail the historical background leading to evolutionary embryology explore embryos in development and embryos in evolution discuss the relationship between embryos evolution environment and ecology discuss the dilemma for homology of the fact that development evolves deal with the importance of understanding how embryos measure time and place both through development and evolutionarily through heterochrony and heterotrophy and set out the principles and processes that underlie evolutionary developmental biology With over one hundred illustrations and photographs extensive cross referencing between chapters and boxes for ancillary material this latest edition will be of immense interest to graduate and advanced undergraduate students in cell developmental and molecular biology and in zoology evolution ecology and entomology in fact anyone with an interest in this new and increasingly important and interdisciplinary field which unifies biology

Comparative Biochemistry V4 Marcel Florkin, 2012-12-02 Comparative Biochemistry A Comprehensive Treatise Volume IV Constituents of Life Part B focuses on the distribution biogenesis and metabolism of cells and organisms Composed of various literature the book first looks at the optical asymmetry of metabolites The natural occurrence of D amino acids and L sugars significance of purity optical asymmetry and protein structure and the relationship of optical asymmetry and cancer are discussed The text also discusses structural studies on cellulose starch and glycogen biochemistry of lignin formation structure and localization of nucleic acids and intraspecific and interspecific variations of protein molecules The book considers the metabolism of aromatic amino acids structural and chemical properties of keratin forming tissues sclerotization and blood coagulation The text further discusses metamorphosis and biochemical adaptation in amphibians The importance of intrinsic tissue sensitivity in tadpoles comparative morphological alterations and the increase in serum albumin and serum protein are considered The book focuses as well on the structure distribution and metabolism of porphyrins pteridines and carotenoids The selection is a good source of data for researchers wanting to study the distribution biogenesis and metabolism of cells and organisms
