Engineering Design Applications VI

Andreas Öchsner, Holm Altenbach, 2024-07-18 This book gives an update on recent developments in the mentioned areas of modern engineering design application Different engineering disciplines such as mechanical materials computer and process engineering provide the foundation for the design and development of improved structures materials and processes The modern design cycle is characterized by an interaction of different disciplines and a strong shift to computer based approaches where only a few experiments are performed for verification purposes A major driver for this development is the increased demand for cost reduction which is also connected to environmental demands In the transportation industry e.g. automotive this is connected with the demand for higher fuel efficiency which is related to the operational costs and the lower harm for the environment One way to fulfil such requirements are lighter structures and/or improved processes for energy conversion Another emerging area is the interaction of classical engineering with the health medical and environmental sectors
