

Microsoft Word 2007: Tips, Tricks, and New Features

As of June 2007 the Old Library Art has transferred over to Microsoft Office 2007. This newest version of Office has undergone some significant interface changes that may be confusing to those who are more familiar with the 2003 version of Office. Hopefully this class guide will help you to smoothly transition over to the new 2007 format and allow you to continue to get your work done without too much added stress. In this class we will cover the new changes to the interface and how to perform important functions that have change or moved as well as many new functions that have been added.

What's New in 2007 (Interface Changes)

- The Ribbon

The most startling change to the user interface (UI) in the new Office 2007 System is the removal of the standard file bar used in almost every standard Windows programs. The tools that used to be found in this part of the application have all been moved to tabs along the "ribbon" that spans the top of the application above the document. By clicking through these tabs (Home, Insert, Page Layout, etc.) you gain quick access to all the tools that used to be hidden away in menus and dialog boxes.

- Live Preview

Live Preview temporarily applies formatting on selected text or objects when you mouse over certain formatting buttons. This temporary formatting is removed once the mouse pointer is moved away from the button, allowing you to quickly preview how the text would appear without having to actually change it.

- Mini Toolbar

The Mini Toolbar appears whenever text is selected or whenever you right-click on the document. The Mini Toolbar initially pops up nearly transparent but becomes opaque when the mouse cursor moves over it, allowing you quick access to the most common text editing tools.

- Quick Access Toolbar

The Quick Access Toolbar is a customizable toolbar that contains icons for some of the most commonly used functions such as saving, print preview, and undo.
