Comparative Economic Studies in Europe Wladimir Andreff, 2020-11-16 This book is written in honor of Horst Brezinski and explores a wide and diverse range of topics related to comparative economic studies. Containing contributions from a number of former Presidents of the European Association for Comparative Economic Studies, the chapters discuss the hard budget constraint, economic transformation in Central Eastern Europe, illiberal democracy, sovereign wealth funds, higher education, the euro, the shadow economy, multinational companies, and economic power. Additional attention is given to new areas of study such as the digital economy and sports economics. This book aims to examine comparative economies across a wide range of geographical areas including China, Hungary, the United Kingdom, Poland, and the United States and will be relevant to those interested in emerging and transition economies, the political economy, economic policy, and international relations.

Agent-Based Simulation of Organizational Behavior Davide Secchi, Martin Neumann, 2015-08-25 The aim of this book is to demonstrate how Agent Based Modelling (ABM) can be used to enhance the study of social agency, organizational behavior, and organizational management. It derives from a workshop sponsored by the Society for the Study of Artificial Intelligence and the Simulation of Behavior (AISB) held at Bournemouth University Business School in 2014 on Modelling Organizational Behavior and Social Agency. The contents of this book are divided into four themes: Perspectives, Modeling Organizational Behavior, Philosophical and Methodological Perspective, and Modeling Organized Crime and Macro Organizational Phenomena. ABM is a particular and advanced type of computer simulation where the focus of modeling shifts to the agent rather than to the system. This allows for complex and more realistic representations of reality, facilitating an innovative socio-cognitive perspective on organizational studies. The editors and contributing authors claim that the use of ABM may dramatically expand our understanding of human behavior in organizations. This is made possible because of: a) the computational power made available by technological advancements; b) the relative ease of the programming; c) the ability to borrow simulation practices from other disciplines; and d) the ability to demonstrate how the ABM approach clearly enables a socio-cognitive perspective on organizational complexity. Showcasing contributions from academics and researchers of various backgrounds and disciplines, this volume provides a global interdisciplinary perspective.
