culture Comprehensive glossary of terms **Immobilization of Enzymes and Cells** José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties **Cell Culture Engineering and Technology** Ralf Pörtner, 2022-02-20 This contributed volume is dedicated towards the progress achieved within the last years in all areas of Cell Culture Engineering and Technology It comprises contributions of active researchers in the field of cell culture development for the production of recombinant proteins cell line development cell therapy and gene therapy with consideration of media development process scale up reactor design monitoring and control and model assisted strategies for process design The knowledge and expertise of the authors cover disciplines like cell biology engineering biotechnology and biomedical sciences This book is conceived for graduate students postdoctoral fellows and researchers interested in the latest developments in Cell Engineering
