Animation and Creativity in the Classroom Britta Pollmuller, 2016-08-25 Research Paper postgraduate from the year 2016 in the subject Guidebooks School Education Pedagogy Auckland University of Technology language English abstract The book is the description of a model of how young people learn about animation and machinima and looks at three key themes creativity which is the process of developing original ideas that have value media literacy which is the knowledge skills and competencies that are required to use and interpret media and culture which influences critical and creative behaviour The study draws from Raymond Williams definition of culture Lev Vygotsky's work on the

development and use of creativity and Paul Well's analysis of animation language. It looks at the history of animation as an art form and a popular medium, the debate about high and popular culture, the history of art education and aesthetics, and media education and criticality. The research consists of case studies of action research that explore approaches to camera-less animation, drawn animation, model animation, and machinima as carried out in Norfolk Secondary Schools and Shome Park, a secure 3D virtual world for thirteen to seventeen-year-olds set in Teen Second Life. The book argues that 1. Animation and machinima offer a multidisciplinary model of creativity that allows for play, imagination, and fantasy, but it also needs a literacy framework to develop students' creativity in order to produce animations that are original and valuable from a critical perspective. 2. Youth culture changes the way young people engage with animation. 3. Worthwhile learning about animation and machinima has some domain-specific elements; it needs specific knowledge and depends on multimodal choices and media literacies. In all of this, the study proposes ways to consolidate art and media education, new media arts, and their respective practices and pedagogies. Good teaching and learning are key factors that foster positive learning progression and are standards by which the quality of young people's creative work can be encouraged, understood, and evaluated.

The Palgrave Handbook of Music and Sound in Japanese Animation Marco Pellitteri, 2024-09-13. This handbook fills a substantial gap in the international academic literature on animation, at large, on music studies, and on the aural dimensions of Japanese animation, more specifically. It offers a unique contribution at the intersection between music and popular culture studies on the one hand and research on Japanese animated productions, often called anime, as popular art forms and formats of entertainment on the other. The book is designed as a reference work consisting of an organic sequence of theory-grounded essays on the development of music sounds and voices in Japanese animation for cinema and television since the 1930s. Each chapter deals with a phase of this history, focusing on composers and performers, films, series, and genres used in the soundtracks for animations made in Japan. The chapters also offer valuable interviews with prominent figures of music in Japanese animation, as well as chapter boxes clarifying specific aspects.
