Indexing of Crystal Diffraction Patterns Adam Morawiec, 2022-09-28 This book provides a detailed self contained description of automatic indexing of crystal diffraction patterns considering both ab initio indexing and indexing of patterns originating from known structures Introductory chapters equip the reader with the necessary basic

knowledge of geometric crystallography as well as kinematic and dynamic theories of crystal diffraction. Subsequent chapters delve and describe *ab initio* indexing of single crystal diffraction patterns and indexing of patterns for orientation determination. The book also reviews methods of indexing powder diffraction and electron spot type patterns as well as the subject of multigrain indexing. Later chapters are devoted to diffraction by helical structures and quasicrystals as well as some aspects of lattice parameter refinement and strain determination. The book is intended equally for materials scientists curious about nuts and bolts of diffraction pattern indexing and orientation mapping systems as well as interdisciplinary researchers from physics, chemistry, and biology involved in crystallographic computing. It provides a rigorous yet accessible treatment of the subject matter for graduate students interested in understanding the functioning of diffraction pattern indexing engines.
