explain their rapid ascent to such importance Florian Fuchs identifies an essential role of literature a role traditionally performed within classical civic discourse of storytelling by looking at new or updated forms of this civic practice in modernity Fuchs's focus in this groundbreaking book is on the fate of topical speech on what is exchanged between participants in argument or conversation as opposed to rhetorical speech which emanates from and ensures political authority He shows how after the decline of the *Ars topica* in the eighteenth century various forms of literary speech took up the role of topical speech that Aristotle had originally identified Thus his book outlines a genealogy of various literary short forms from fable fairy tale and novella to twenty first century video storytelling that attempted on both high and low levels of culture to exercise again the social function of topical speech Some of the specific texts analyzed include the novellas of Theodor Storm and the novella like *lettre de cachet* proverbial fictions of Gustave Flaubert and Gottfried Keller the fairy tale as rediscovered by Vladimir Propp and Walter Benjamin the epiphanies of James Joyce and the video narratives of Hito Steyerl

Agents and Peer-to-Peer Computing Gianluca Moro,Claudio Sartori,2004-12-03 Peer to peer P2P computing is currently attracting enormous public attention spurred by the popularity of file sharing systems such as Napster Gnutella Morpheus Kaza and several others In P2P systems a very large number of autonomous computing nodes the peers rely on each other for services P2P networks are emerging as a new distributed computing paradigm because of their potential to harness the computing power and the storage capacity of the hosts composing the network and because they realize a completely open decentralized environment where everybody can join in autonomously Although researchers working on distributed computing multiagent systems databases and networks have been using similar concepts for a long time it is only recently that papers motivated by the current P2P paradigm have started appearing in high quality conferences and workshops In particular research on agent systems appears to be most relevant because multiagent systems have always been thought of as networks of autonomous peers since their inception Agents which can be superimposed on the P2P architecture embody the description of task environments decision support capabilities social behaviors trust and reputation and interaction protocols among peers The emphasis on decentralization autonomy ease and speed of growth that gives P2P its advantages also leads to significant potential problems Most prominent among these are coordination the ability of an agent to make decisions on its own actions in the context of activities of other agents and scalability the value of the P2P systems in how well they self organize so as to scale along several dimensions including complexity heterogeneity of peers robustness traffic redistribution etc This book brings together an introduction three invited articles and revised
