Fusion Garry McCracken, Peter Stott, 2005-02-10 Unraveling the role of fusion in the universe has taken almost a century since Einstein s proof of the equivalence of energy and matter in 1905 The discovery that fusion reactions are responsible for the building of the light elements in the Big Bang and the subsequent development of the heavier elements in the stars and in exploding supernovae is one of the field s most exciting successes In this engaging book McCracken and Stott reexamine these discoveries in astrophysics and discuss the

possibility that fusion reactions are not only our sun's source of power but may also be induced for our use on earth Details the initial discovery of nuclear fusion all related research and today's concern over future energy supply Examines current attempts to create nuclear fusion here on earth Enhanced with color illustrations and examples Provides a non technical treatment of fusion using straightforward language Includes technical notes for aspiring physicists

Disciplines as Frameworks for Student Learning Tim Riordan, James Roth, 2023-07-03 What should students be able to do and how should they be able to think as a result of study in a discipline What does learning in the disciplines look like at different developmental levels How does one go about designing such learning and assessment in the disciplines What institutional structures and processes can assist faculty to engage and teach their disciplines as frameworks for student learning Creating ways to make a discipline come alive for those who are not experts even for students who may not take more than one or two courses in the disciplines they study requires rigorous thought about what really matters in a field and how to engage students in the practice of it Faculty from Alverno College representing a range of liberal arts disciplines chemistry economics history literature mathematics and philosophy here reflect on what it has meant

for them to approach their disciplines as frameworks for student learning They present the intellectual biographies of their explorations the insights they have gained and examples of the practices they have adopted The authors all demonstrate how the ways of thinking they have identified as significant for their students in their respective disciplines have affected the way they design learning experiences and assessments They show how they have shaped their teaching around the ways of thinking they want their students to develop within and across their disciplines and what that means in terms of designing assessments that require students to demonstrate their thinking and understanding through application and use This book will appeal to faculty interested in going beyond mere techniques to a more substantive analysis of how their view of their respective disciplines might change when seen through the lens of student learning It will also serve the needs of graduate students trainers of Tas and anyone engaged in faculty development or interested in the scholarship of teaching
