Chan, Michael Kirschfink, Luis Eduardo Coelho Andrade, Stefan Vieths, 2023-08-24 Along the last several decades it has been progressively appreciated that immunology plays an overwhelming role in the physiology and pathophysiology of most organs tissues and biological systems in

multicellular organisms Accordingly several immunological parameters are used in research and clinical laboratories with the purpose of investigating diagnosing and monitoring a variety of pathological conditions The rapidly evolving field of laboratory testing in immunology poses several challenges to professionals working in research and clinical laboratories medical practice educational activities in vitro diagnostic industry and regulatory agencies Regular analytes such as albumin glucose and insulin are homogeneous among individuals of the same species This property represents an advantage when it comes to optimize the determination methods as well as to establish standardization and quality assessment strategies In contrast several immunologic analytes present tremendous variability across individuals in the same species In fact some are unique at the individual level For example the repertoire of immunoglobulins specific for a given pathogen e g rubella is specific for each individual in terms of the balance of targeted antigens and epitopes immunoglobulin isotypes antibody avidity Fc glycosylation rate and so on As a corollary the panel of anti rubella antibodies is necessarily different from one to other individual This also applies to autoantibodies and to IgE to allergens Polymorphism is prevalent for other immunologic parameters such as Complement components cell receptors cluster differentiation molecules CD and downstream signal transduction mediators

Immunology of Human Infection André J. Nahmias, Richard J. O'Reilly, 2012-12-06 When we were first approached by the senior editors of this series to edit a book on interactions between the host and infectious agents we accepted this offer as an exciting challenge The only condition readily agreed upon was that such a book should focus on the immunology of infections in humans Our reasons if not biases were severalfold We sensed that the fields of microbiology and immunology which had diverged as each was focusing on its individual search were coming together In agreement with the opinions expressed by Dr Richard Krause in the Introduction we strongly believed that the development of the immune system evolved in response to infectious agents and that the evolution of these agents was influenced in turn by the character of the host's responses An intensive examination of the multitude of primitive or more recently developed host defense mechanisms to determine their relative contribution to man's resistance to a given infectious agent appeared to us to be of crucial basic and practical interest Many immune mechanisms studied in animals were being explored in humans and it appeared timely to focus particularly on what was known about man's resistance to infectious agents correlating this information with lessons learned from relevant experiments in animal models
