One-wide Studies of Grapevine Fruit Composition and Responses to Agro-environmental Factors in the Era of Systems Biology José Tomás Matus, Simone Diego Castellarin, Giovanni Battista Tornielli, 2019-12-06 Fruits play a substantial role in the human diet as a source of vitamins minerals dietary fiber and a wide range of molecules relevant to health promotion and disease prevention The characterization of genes involved in the accumulation of these molecules during fruit development and ripening and in the overall plant's response to the environment constitutes a fundamental step for improving yield and quality related traits and for predicting this crop's behavior in the field This is certainly the case for grapevine *Vitis vinifera* L one of the most largely cultivated fruit crops in the world The cultivation of this species is facing challenging scenarios driven by climate change including increases in atmospheric carbon dioxide CO₂ solar radiation and earth surface temperature and decreases of water and nutrient availability All these events will potentially affect the grapevine phenology physiology and metabolism in many growing regions and ultimately affect the quality of their fruits and of the most important derived product the wine The sequencing of the grapevine genome has given rise to a new era characterized by the generation of large scale data that requires complex computational analyses Numerous transcriptomic and metabolomic studies have been performed in the past fifteen years providing insights into the gene circuits that control the accumulation of all sorts of metabolites in grapevines From now on the integration of two or more omics will allow depicting gene transcript metabolite networks from a more holistic i.e. systems perspective This eBook attempts to support this new direction by gathering innovative studies that assess the impact of genotypes the environment and agronomical practices on fruits at the one scale The works hereby collected are part of a Research Topic covering the use of omics driven strategies to understand how environmental factors

and agronomical practices including microclimate modification e g sunlight incidence or temperature water availability and irrigation and postharvest management affect fruit development and composition These studies report well settled transcriptomic and metabolomic methods in addition to newly developed techniques addressing proteome profiles genome methylation landscapes and ionomic signatures some of which attempt to tackle the influence of terroir i e the synergic effect of micro climate soil composition grape genotype and vineyard practices A few reviews and opinions are included that focus on the advantages of applying network theory in grapevine research Studies on vegetative organs in their relation to fruit development and on fruit derived cell cultures are also considered **Environmental Health Perspectives** ,1993

Current Advances in Ecological & Environmental Sciences ,1992 **Military Strategies for Sustainment of Nutrition and Immune Function in the Field** Committee on Military Nutrition Research, Institute of Medicine, 1999-05-27 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries Combined stressors may reduce the normal ability of soldiers to resist pathogens increase their susceptibility to biological warfare agents and reduce the effectiveness of vaccines intended to protect them There is also a concern with the inappropriate use of dietary supplements This book one of a series examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field It reviews the impact of compromised nutrition status on immune function the interaction of health exercise and stress both physical and psychological in immune function and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function The first part of the book contains the committee s workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops responses to the Army s questions conclusions and recommendations The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as an introduction to what is known about immune function the assessment of immune function the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health Clinical Neuroimmunology Jack Antel, Gary Birnbaum, Hans-Peter Hartung, Angela

Vincent, 2005-10-06 Clinical Neuroimmunology is the major reference text in the field providing broad and comprehensive coverage of the interaction between the nervous and immune systems in both normal and diseased states Understanding this interaction is fundamental to developing therapeutic approaches to disease and injury of the nervous system that are currently only marginally amenable to therapy Neuroimmunology is a well recognised and growing specialty world wide both at the basic science and clinical level It is a fast moving field and this is the most up to date text available Chapters are dedicated to the role of the immune system in disorders affecting both the central and peripheral nervous systems including

important neurodegenerative diseases such as multiple sclerosis and HIV related neural degeneration which cause life long disability Extensive coverage is given to a whole array of immune directed therapies The book has a strong international team of well respected high profile editors and authors The first edition published to extensive and positive reviews and has established itself as the principal reference source in the field This second edition summarizes recent advances in clinical neuroimmunology in a comprehensive and unbiased way
