

Activity A: Types of water pollution	<u>Get the Gizmo ready:</u> Check that the TYPE tab and Toxic pollution are selected.	
---	---	---

Question: What are the main types of water pollution?

1. Read and learn: Besides toxic pollution, the other types of pollution are **sediment pollution**, **nutrient pollution**, and **bacterial pollution**. You have already described toxic pollution on the previous page. Read about the other types, and describe each in your own words.

Sediment pollution

Description:	Pollution caused by erosion and deposit build-up.
Causes:	Logging, mining, farming, and construction can expose soil to erosion.
Consequences:	Destroys fish and wildlife habitat, and clouds the water, blocking sunlight and interfering with aquatic plants.

Nutrient pollution

Description:	Pollution caused by excessive nutrients in water.
Causes:	Fertilizer, manure, untreated human waste, and some detergents.
Consequences:	Caused explosive algal growth, which when the algae die, the decomposition consumes oxygen and leads to hypoxia or low oxygen conditions, killing fish and other aquatic animals.

Bacterial pollution

Description:	Pollution caused by untreated human or animal waste is released directly into water resources.
Causes:	Animal manure and untreated human waste.
Consequences:	Drinking water contaminated with fecal bacteria may cause outbreaks of cholera and dysentery. Fecal bacteria cause health problems for animals and plants as well.
