Body Representations, Peripersonal Space, and the Self: Humans, Animals, Robots Matej Hoffmann,Alex Pitti,Lorenzo Jamone,Eszter Somogyi,Pablo Lanillos,2020-07-22 Coding Properties in Invertebrate Sensory Systems Sylvia Anton,Anders Garm,Berthold G. Hedwig,2017-03-07 Animals rely on sensory input from their environment for survival and reproduction Depending on the importance of a signal for a given species accuracy of sensory coding might vary from pure detection up to precise coding of intensity quality and temporal features of the signal Highly sophisticated sense organs and related central nervous sensory pathways can be of utmost importance for animals in a complex environment and when using advanced communication systems In sensory systems different anatomical and physiological features have evolved to optimally encode behaviourally relevant signals at the level of sense organs and central processing The wide range of organizational complexity in combination with their relatively simple and accessible nervous systems makes invertebrates excellent models to study general sensory coding principles The contributions to this e book illustrate on one hand particular features of specific sensory systems and on the other hand indicate not only common features of sensory coding across invertebrate phyla but also similar processing principles of complex stimuli between different sensory modalities The chapters show that the extraction of behaviourally relevant signals from all environmental stimuli as well as the detection of low intensity signals and the analysis of temporal features can be similar across sensory modalities including olfaction vision mechanoreception and heat perception Applied Basic Sciences Questions-Answers Mr. Rohit Manglik,2024-07-30 A comprehensive collection of exam oriented questions and answers across subjects like anatomy physiology and biochemistry ideal for medical students and entrance exams Multisensory Perception and Action: psychophysics, neural mechanisms, and applications Zhuanghua Shi,Hermann Josef Mueller,2015 **A Second Part of Observations, Censures, and Confutations of Divers Errours in Mr. Hobbs His Leviathan: Beginning at the Seventeenth Chapter of that Book. Embodied and grounded cognition Anna Borghi, Diane Pecher, 2012-01-01 In the last 10 15 years the embodied and grounded cognition approach has become widespread in all fields related to cognitive science such as cognitive and social psychology neuroscience philosophy anthropology computational modelling and robotics According to this approach our cognitive activity is grounded in sensory motor processes and situated in specific contexts and situations Therefore in this view concepts consist of the reactivation of the same neural pattern that is present when we perceive and or interact with the objects they refer to In the same way understanding language would imply forming a mental simulation of what is linguistically described This simulation would entail the recruitment of the same neurons that are activated when actually acting or perceiving the situation action emotion object or entity described by language In the last years a lot of evidence has been collected in favour of EC and GC view The aim of this Research Topic is twofold First it intends to give an idea of the field of embodied and grounded cognition in its broadness We therefore intend to invite scientists of different disciplines anthropology philosophy linguistics cognitive and social psychology neuroscience computer science to submit their proposals The second aim of this Research Topic is to focus on some challenges that in our opinion embodied and grounded theories of cognition need to face First we believe that one important challenge for EC and GC views is to account for the way the so called abstract concepts and abstract words are represented Evidence on the representation of concrete concepts and words is compelling whereas evidence on abstract concepts representation is still too scarce and limited to restricted domains We therefore welcome proposals dealing with this complex issue Second we think that embodied and grounded theories of cognition would need to formulate more precise hypotheses and that in general within the field a larger theoretical effort should be made It is striking that even if a lot of work in the field of computational modelling and robotics starts from an embodied approach experimental and modelling work on embodied cognition remain somehow separate We therefore invite researchers to submit papers proposing models which might help to explain phenomena as well as to constrain and specify in more detail the predictions and the claims advanced within the framework of EC and GC theories

Relationship in Mental Functioning and Development of Body-Focused Disorders in Adolescence, volume II Stefania Cella, Cesare Massimo Cavallera, 2024-06-28 This collection is Volume II of the Research Topic The Importance of the Body Mind Relationship in Mental Functioning and Development of Body Focused Disorders in Adolescence Adolescence is a critical period when the conflict between the body and mind becomes particularly pronounced due to the physical changes associated with puberty These pubescent transformations can affect body image and the perception of self necessitating a renegotiation of the relationship between body and mind Failure to navigate this process successfully can lead to dissociation from the sexual body resulting in feelings of alienation hatred disinvestment and even self destructive behaviors such as eating disorders self injury and suicide

Embodying the Self: Neurophysiological Perspectives on the Psychopathology of Anomalous Bodily Experiences Mariateresa Sestito, Andrea Raballo, Giovanni Stanghellini, Vittorio Gallese, 2018-04-12 Since the beginning of the 20th Century phenomenology has developed a distinction between lived body Leib and physical body Koerper a distinction well known as body subject vs body object Hanna and Thompson 2007 The lived body is the body experienced from within my own direct experience of my body lived in the first person perspective myself as a spatiotemporal embodied agent in the world The physical body on the other hand is the body thematically investigated from a third person perspective by natural sciences as anatomy and physiology An active topic affecting the understanding of several psychopathological disorders is the relatively unknown dynamic existing between aspects related to the body object that comprises the neurobiological substrate of the disease and the body subject the experiences reported by patients Nelson and Sass 2017 A clue testifying the need to better explore this dynamic in the psychopathological context is the marked gap that still exists between patients clinical reports generally entailing disturbing experiences and etiopathogenetic theories and therapeutic practices that are mainly postulated at a bodily brain level of description and analysis The phenomenological exploration typically targets descriptions of persons lived experience For instance patients suffering from schizophrenia may describe their thoughts as alien thoughts are intruding into my head and the world surrounding them as fragmented the world is a series of snapshots Stanghellini et al 2015 The result is a rich and detailed collection of the patients qualitative self descriptions Stanghellini and Rossi 2014 that reveal fundamental changes in the structure of experiencing and can be captured by using specific assessment tools Parnas et al 2005 Sass et al 2017 Stanghellini et al 2014 The practice of considering the objective and the subjective levels of analysis as separated in the research studies design has many unintended consequences Primarily it has the effect of limiting actionable neuroscientific progress within clinical practice This holds true both in terms of availability of evidence based treatments for the disorders as well as for early diagnosis purposes In response to this need this collection of articles aims to promote an interdisciplinary endeavor to better connect the bodily objective level of analysis with its experiential corollary This is accomplished by focusing on the convergence between neuro physiological evidence and the phenomenological manifestations of anomalous bodily experiences present in
