Teaching Mathematics in Grades 6 - 12 Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6 12 explores how research in mathematics education can inform teaching practice in grades 6 12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 12 classrooms and how students thinking may develop in response to different teaching strategies

Word Problems Stephen K. Reed, 1998-12 Integrates work from cognitive psychology mathematics education and instructional technologies to inform readers of what is known about how people solve or fail to solve word problems and how this knowledge can improve instruction

Illuminating and Advancing the Path for Mathematical Writing Research Colonnese, Madelyn W., Casa, Tutita M., Cardetti, Fabiana, 2023-11-20 Mathematical writing is essential for students math learning but it is often underutilized due to unclear guidelines Mathematical writing is a mode of communication that provides teachers access to their students thinking and importantly offers students an opportunity to deepen their mathematical understanding engage in mathematical reasoning and learn a fundamental way to communicate mathematically Notably one needs to be able to judiciously combine mathematical symbols representations and text However more research is needed to exemplify the qualities of mathematical writing develop implementation methods and support teachers Illuminating and Advancing the Path for Mathematical Writing Research is a necessary comprehensive resource designed to enhance mathematical writing and promote equitable learning This research book provides a comprehensive understanding of the current state of mathematical writing and illuminates various perspectives on moving the teaching and learning of k 12 mathematical writing forward Mathematical writing is an important yet underutilized component of mathematical discourse and this book offers further insight into understanding what it means to write mathematically for mathematics educators and researchers It informs with research based implementation strategies and creates purposeful professional learning opportunities Ultimately k 12 students will benefit from a more informed field because they will have access to a vital mode of mathematical reasoning and communication

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between

about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century. It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations. After garnering much initial support it began to attract criticism. But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched. This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement. Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations. The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America. The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki. In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges. This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite. Undoubtedly this is a landmark publication in education. The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective. The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends.
