The Cell Cycle in the Central Nervous System Damir Janigro, 2008-01-23. Cell Cycle in the Central Nervous System overviews the changes in cell cycle as they relate to prenatal and postnatal brain development, progression to neurological disease, or tumor formation. Topics covered range from the cell cycle during the prenatal development of the mammalian central nervous system to future directions in postnatal neurogenesis through gene transfer, electrical stimulation, and stem cell introduction. Additional chapters examine the postnatal development of neurons and glia, the regulation of cell cycle in glia, and how that regulation may fail in pretumor conditions or following a nonneoplastic CNS response to injury. Highlights include treatments of the effects of deep brain stimulation on brain development and repair, the connection between the electrophysiological properties of neuroglia, cell cycle, and tumor progression, and the varied immunological responses and their regulation by cell cycle.

"One Rotten Apple Spoils the Whole Barrel": The Plant Hormone Ethylene, the Small Molecule and its Complexity Domenico De Martinis, Tomotsugu

Koyama, Caren Chang, 2015-08-14 The gaseous molecule ethylene C_2H_4 which is small in size and simple in structure is a plant hormone most often associated with fruit ripening yet has a diversity of effects throughout the plant life cycle While its agricultural effects were known even in ancient Egypt the complexity of its mode of action and the broad spectrum of its effects and potential uses in plant physiology remain important scientific challenges today In the last few decades the biochemical pathway of ethylene production has been uncovered ethylene perception and signaling have been molecularly dissected ethylene responsive transcription factors have been identified and numerous effects of ethylene have been described ranging from water stress development senescence reproduction plant pathogen interactions and of course ripening Thus ethylene is involved in plant development in biotic and abiotic stress and in reproduction There is no stage in plant life that is not affected by ethylene modulated by a complex and fascinating molecular machinery
