The Challenge of Chance Klaas Landsman, Ellen van Wolde, 2016-06-09 This book presents a multidisciplinary perspective on chance with contributions from distinguished researchers in the areas of biology cognitive neuroscience economics genetics general history law linguistics logic mathematical physics statistics theology and philosophy The individual chapters are bound together by a general introduction followed by an opening chapter that surveys 2500 years of linguistic philosophical and scientific reflections on chance coincidence fortune randomness luck and related concepts A main conclusion that can be drawn is that even after all this time we still cannot be sure whether chance is a truly fundamental and irreducible phenomenon in that certain events are simply uncaused and could have been otherwise or whether it is always simply a reflection of our ignorance Other challenges that emerge from this book include a better understanding of the contextuality and perspectival character of chance including its scale dependence and the curious fact that throughout history including contemporary science chance has been used both as an explanation and as a hallmark of the absence of explanation As such this book challenges the reader to think about chance in a new way and to come to grips with this endlessly fascinating phenomenon

other researchers in a domain think about the world and go about their business. Due to its positive impacts, transformative research can be regarded as inherently having greater value than more conventional research, and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs. Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness. The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted, communicated, and its influence on the discipline has become clear. *Fostering Transformative Research in the Geographical Sciences* reviews how transformative research has emerged in the past, what its early markers were, and makes recommendations for how it can be nurtured in the future.
