Processing This part of the book focuses on essential data manipulation and preparation techniques within a Spark environment. It covers computing summary statistics on a Spark DataFrame using `summary` or `dbutils` data summaries and methods for outlier removal based on standard deviation or IQR. Emphasis is placed on creating visualizations for both categorical and continuous features and comparing feature types using appropriate methods. The book provides a comprehensive understanding of imputing missing values with mode, mean, or median and the practical application of one-hot encoding for categorical features, including identifying appropriate scenarios for its use. It also discusses the relevance and application of log scale transformation.

Section 3 Model Development This section guides the reader through the intricacies of model building. It covers selecting appropriate algorithms based on ML foundations for given scenarios and methods to mitigate data imbalance in training data. The book differentiates between estimators and transformers and provides guidance on developing robust training pipelines. Hyperparameter tuning is a key focus, detailing the use of Hyperopt's `fmin` operation and exploring random grid or Bayesian search methods. It also addresses parallelizing single node models for hyperparameter tuning. The benefits and downsides of cross validation versus train-validation splits are discussed, along with the practical application of cross validation in model fitting and understanding the number of models trained during grid search and cross validation. The book extensively covers common classification metrics (F1, Log Loss, ROC AUC) and regression metrics (RMSE, MAE, R-squared), guiding the reader in choosing the most appropriate metric for specific objectives. Finally, it addresses the need to exponentiate log-transformed variables before evaluation and interpreting predictions, and assessing the impact of model complexity and the bias-variance tradeoff on model performance.

Section 4 Model Deployment The final section of the book is dedicated to deploying machine learning models. It differentiates between and highlights the advantages of various model serving approaches: batch, real-time, and streaming. Practical steps for deploying a custom model to a model endpoint are provided. The book covers using pandas for performing batch inference and explains how streaming inference is achieved with Delta Live Tables. It also details deploying and querying a model for real-time inference and splitting data between endpoints for real-time inference.
