

2. On your own: Look up Annie Jump Cannon on the Internet or in a library and read her story. Share your discoveries with your classmates and teacher.

The creation of modern star classification was made possible by the cataloging work of American astronomer Annie Jump Cannon.

Activity B: Unusual stars	<u>Get the Gizmo ready:</u> • Select star 5.	
--	--	---

Question: What else can we learn from stellar spectra?

1. Observe: Observe the spectra of stars 5 – 10. Identify the elements in each spectrum, and try to classify each star. If you notice unusual features in these spectra, describe them.

Star	Color	Elements in spectrum	Class	Unusual features
5	Yellow	None of the elements match	G	Similar to sodium's double line, however they are displaced
6	Red	Neutral titanium oxide and neutral iron (not shown)	M	The neutral magnesium does not fit since it has some more pronounced black lines than the original magnesium.
7	Blue-White	Hydrogen, Neutral helium	B	Normal
8	Yellow	Calcium, Neutral sodium	G	The light flickers, moves up and down, and there are some unfamiliar dark lines in the neutral sodium.
9	White	Ionized calcium, Hydrogen, Neutral sodium	F	Calcium did not match neither ionized or neutral, besides moving sometimes
10	Yellow	Calcium, Neutral sodium	G	Normal

Match: Write the number of the star or object that matches each description. Then use this information to help you identify the elements and reclassify the stars in the table above.

- | | |
|---|--|
| 3 | High atmospheric pressures in a star cause spectral lines to be broadened, or "smeared out." Giant stars , which have relatively low atmospheric pressures, are characterized by narrow spectral lines. |
| 2 | If a star is moving away from an observer, spectral lines are redshifted , or shifted toward the red end of the spectrum. An approaching star is blueshifted . |
| 8 | A star orbited by a large planet will move in a small circle. This will cause its spectrum to be slightly redshifted part of the time and blueshifted at other times. |
