Human Behavior in the Social Environment José B. Ashford, Craig W. LeCroy, Kathy L. Lortie, 2006 Ashford, LeCroy and Lortie's ground breaking book offers students a balanced integrated introduction to human behavior in the social environment. Lively and comprehensive, this book succeeds by helping students connect foundation knowledge with practice concerns. Clarified through the introduction of study tables and concept maps at the end of each discussion, behavior in the development chapters, the authors look at biopsychosocial development across the life span using an integrative multidimensional approach, discussing integrative practice, theory, treatment, and services throughout. This multidimensional framework provides a concrete tool for the reader to assess human behavior from a perspective that truly reflects the values and knowledge base of the social work profession. Together, the book's solid coverage of foundation knowledge, integration of the biopsychosocial dimensions for assessing social functioning, its multidimensional framework, and its use of case studies to illuminate the applied aspects of HBSE content, along with the authors' consistent attention to diversity, successfully combine to give readers a meaningful, exciting experience.

Language Development and Social Interaction in Blind Children Miguel Perez Pereira, Gina Conti-Ramsden, 2013-05-13 This book provides an up to date account of blind children's developing communicative abilities with particular emphasis on social cognition and language acquisition from infancy to early school age. It purports to foster dialogue between those interested in the study of typically developing children and those interested in the development of children who are blind, and to provide insights and new explanations of why the development of blind children may differ from that of sighted children. The book also aims to identify and examine current theoretical issues which are likely to be at the centre of developments in the fields of child language and developmental psychology. *Language Development and Social Interaction in Blind Children* is also a timely book. The study of blind children's development constitutes a unique opportunity to study the effect of vision on development and more specifically on the development of language and certain aspects of social cognition. Current interest in the development of theory of mind and perspective taking in language learning make the case of blind children crucial to our understanding of certain aspects of psychological functioning. The book explores these issues, challenges some widely held beliefs about the development of communication in blind children, and provides a cohesive picture of our knowledge to date.
