

- c) Fuel quantity through both bypass outlets is controlled by the diameter of the drilled passages. Both bypass outlets are drilled from the venturi straight into the pilot fuel/air mixture delivery passage.

5) Mid and High Speed System

- a) Fuel flow for mid-range and high speed operation comes through the main jet (PQ20), through the needle jet (PQ21), and around the jet needle (188) into the venturi. As engine rpm increases, (the butterfly valve is opened further), venturi vacuum also increases. This causes the vacuum piston to lift, which in turn lifts the tapered jet needle. More fuel flows past the needle and to the engine.
- b) Air enters the primary air jet (4222) and travels down a drilled passage to the needle jet. It mixes with the fuel at this point. Final air/fuel mixing is accomplished when this primary air/fuel mixture enters the venturi and mixes with the air passing through.
