F.12 Exercises

1.6

- Let $z = 5 + i9$. Find z^{-1} .
 $(5 + i9)^{-1} = \frac{5}{108} - \frac{9}{108}i$
- Let $z = 2 + i7$ and let $w = 3 - i8$. Find $zw, z + w, z^2$, and w/z .
 $52 + 5i, 5 - i, -45 + 28i$, and $-\frac{29}{23} - \frac{15}{23}i$.
- Give the complete solution to $z^4 + 16 = 0$.
 $z^4 + 16 = 0$, Solution is: $(1 - i)\sqrt{2}, -(1 + i)\sqrt{2}, (1 - i)\sqrt{2}, (1 + i)\sqrt{2}$.
- Graph the complex cube roots of 8 in the complex plane. Do the same for the four fourth roots of 16.
 The cube roots are the solutions to $z^3 + 8 = 0$, Solution is: $i\sqrt{3} + 1, 1 - i\sqrt{3}, -2$
 The fourth roots are the solutions to $z^4 + 16 = 0$, Solution is:

$$(1 - i)\sqrt{2}, -(1 + i)\sqrt{2}, (1 - i)\sqrt{2}, (1 + i)$$

$\sqrt{2}$. When you graph these, you will have three equally spaced points on the circle of radius 2 for the cube roots and you will have four equally spaced points on the circle of radius 2 for the fourth roots. Here are pictures which should result.

- If z is a complex number, show there exists w a complex number with $|w| = 1$ and $wz = |z|$.
 If $z = 0$, let $w = 1$. If $z \neq 0$, let $w = \frac{\bar{z}}{|z|}$
- De Moivre's theorem says $|r(\cos t + i \sin t)|^n = r^n (\cos nt + i \sin nt)$ for n a positive integer. Does this formula continue to hold for all integers, n , even negative integers? Explain.

Yes, it holds for all integers. First of all, it clearly holds if $n = 0$. Suppose now that n is a negative integer. Then $-n > 0$ and so

$$|r(\cos t + i \sin t)|^n = \frac{1}{|r(\cos t + i \sin t)|^{-n}} = \frac{1}{r^{-n} (\cos(-nt) + i \sin(-nt))}$$

Lopez, 2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection

of works papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design

Numerical Methods for Mixed Finite Element Problems Jean Deteix,Thierno Diop,Michel Fortin,2022-09-24 This book focuses on iterative solvers and preconditioners for mixed finite element methods It provides an overview of some of the state of the art solvers for discrete systems with constraints such as those which arise from mixed formulations Starting by recalling the basic theory of mixed finite element methods the book goes on to discuss the augmented Lagrangian method and gives a summary of the standard iterative methods describing their usage for mixed methods Here preconditioners are built from an approximate factorisation of the mixed system A first set of applications is considered for incompressible elasticity problems and flow problems including non linear models An account of the mixed formulation for Dirichlet s boundary conditions is then given before turning to contact problems where contact between incompressible bodies leads to problems with two constraints This book is aimed at graduate students and researchers in the field of numerical methods and scientific computing

Fuzzy Logic with Engineering Applications Timothy J. Ross,2005-04-08 Fuzzy logic refers to a large subject dealing with a set of methods to characterize and quantify uncertainty in engineering systems that arise from ambiguity imprecision fuzziness and lack of knowledge Fuzzy logic is a reasoning system based on a foundation of fuzzy set theory itself an extension of classical set theory where set membership can be partial as opposed to all or none as in the binary features of classical logic Fuzzy logic is a relatively new discipline in which major advances have been made over the last decade or so with regard to theory and applications Following on from the successful first edition this fully updated new edition is therefore very timely and much anticipated Concentration on the topics of fuzzy logic combined with an abundance of worked examples chapter problems and commercial case studies is designed to help motivate a mainstream engineering audience and the book is further strengthened by the inclusion of an online solutions manual as well as dedicated software codes Senior undergraduate and postgraduate students in most engineering disciplines academics and practicing engineers plus some working in economics control theory operational research etc will all find this a valuable addition to their bookshelves

El-Hi Textbooks in Print ,1981 A Method of Fundamental Solutions in Poroelasticity to Model the Stress Field in Geothermal Reservoirs Matthias Albert Augustin,2015-07-15 This monograph focuses on the numerical methods needed in the context of developing a reliable simulation tool to promote the use of renewable energy One very promising source of energy is the heat stored in the Earth s crust which is harnessed by so called geothermal facilities Scientists from fields like geology geo engineering geophysics and especially geomathematics are called upon to help make geothermics a reliable and safe energy production method One of the challenges they face involves modeling the mechanical stresses at work in a reservoir The aim of this thesis is to develop

a numerical solution scheme by means of which the fluid pressure and rock stresses in a geothermal reservoir can be determined prior to well drilling and during production For this purpose the method should i include poroelastic effects ii provide a means of including thermoelastic effects iii be inexpensive in terms of memory and computational power and iv be flexible with regard to the locations of data points After introducing the basic equations and their relations to more familiar ones the heat equation Stokes equations Cauchy Navier equation the method of fundamental solutions and its potential value concerning our task are discussed Based on the properties of the fundamental solutions theoretical results are established and numerical examples of stress field simulations are presented to assess the method s performance The first ever 3D graphics calculated for these topics which neither requiring meshing of the domain nor involving a time stepping scheme make this a pioneering volume
