It is aimed at students of computer science and mathematics teaching degree and Bachelor's Master's and is designed to accompany lectures for self study and for exam preparation. Through explanatory introductions to definitions, numerous examples, counterexamples, diagrams, cross references, and outlooks, the authors manage to present the wide range of topics concisely and comprehensibly. Numerous exercises facilitate the deepening of the material. Due to its compact presentation of all important discrete and algebraic structures and its extensive index, the book also serves as a reference for mathematicians, computer scientists, and natural scientists. Contents: From propositional and predicate logic to sets and combinatorics, numbers, relations, and mappings, graphs to the rich spectrum of algebraic structures and a brief introduction to category theory. Additional chapters include rings and modules as well as matroids. This book is a translation of the second German edition. The translation was done with the help of artificial intelligence. A subsequent human revision was done primarily in terms of content so the book may read stylistically differently from a conventional translation. **El-Hi Textbooks and Serials in Print**, 1985 *Catholic School Journal*, 1965 *Instructional Materials Price List and Order Form* California.
