Linguistics and Language Behavior Abstracts, 2008 *Social Movements, 1768-2008* Charles Tilly, Lesley J. Wood, 2020-04-30 This expanded second edition of Tilly's widely acclaimed 2004 book brings this analytical history of social movements fully up to date. Tilly and Wood cover such recent topics as immigrants' rights, new media technologies, anti-Olympic organizing in China, new mobilizations against the Iraq War, and the role of bloggers and Facebook in social movement activities. Coverage of these and other recent events serves to expand further the book's seminal theorizing and conceptualization of how social movements grew from eighteenth-century Europe to eventually fuel popular movements all over the world.

Animal Creativity and Innovation, 2015-10-29 Animal Creativity and Innovation explores theories and research on animal innovation and creativity, comparing and contrasting it with theory and research on human creativity and innovation. In doing so, it encompasses findings from psychology, biology, neuroscience, engineering, business, ecology, and education. The book includes examples of animal innovation in parrots, dogs, marine mammals, insects, and primates, exploring parallels from creative play in children. The book defines creativity, differentiating it from play, and looks at evolutionary models and neurological constructs. The book further explores applied aspects of animal innovation and creativity, including tool use and group dynamics, as well as barriers to creativity. The final chapters look into how creative behavior may be taught or trained. Each chapter is followed by a commentary for integration of thoughts and ideas between animal and human research, behavioral and cognitive research, and theory and observation in real life. Compares theory and research on animal and human creativity. Defines and differentiates creativity from play. Reviews applied creativity in tool use and social dynamics. Includes examples of animal creativity in multiple species.

Evolution of Primate Social Cognition Laura Desirée Di Paolo, Fabio Di Vincenzo, Francesca De Petrillo, 2018-09-14 This interdisciplinary volume brings together expert researchers coming from primatology, anthropology, ethology, philosophy of cognitive sciences, neurophysiology, mathematics, and psychology to discuss both the foundations of non-human primate and human social cognition, as well as the means that currently exist to study the various facets of social cognition. The first part focusses on various aspects of social cognition across primates, from the relationship between food and social behaviour to the connection with empathy and communication, offering a multitude of innovative approaches that range from field studies to philosophy. The second part details the various epistemic and methodological means that exist to study social cognition, in particular how to ascertain the proximal and ultimate mechanisms of social cognition through experimental modelling and field studies. In the final part, the mechanisms of cultural transmission in primate and human societies are investigated, and special attention is given to how the evolution of cognitive capacities underlies primates' abilities to use and manufacture tools, and how this in turn influences their social ecology. A must-read for both young scholars as well as established researchers.

Matsuzawa, Jean-Yves Georges, 2021-02-09 **Social Learning** William Hoppitt, Kevin N. Laland, 2013-07-21 Many animals including humans acquire valuable skills and knowledge by copying others Scientists refer to this as social learning It is one of the most exciting and rapidly developing areas of behavioral research and sits at the interface of many academic disciplines including biology experimental psychology economics and cognitive neuroscience Social Learning provides a comprehensive practical guide to the research methods of this important emerging field William Hoppitt and Kevin N Lala define the mechanisms thought to underlie social learning and demonstrate how to distinguish them experimentally in the laboratory They present techniques for detecting and quantifying social learning in nature including statistical modeling of the spatial distribution of behavior traits They also describe the latest theory and empirical findings on social learning strategies and introduce readers to mathematical methods and models used in the study of cultural evolution This book is an indispensable tool for researchers and an essential primer for students Provides a comprehensive practical guide to social learning research Combines theoretical and empirical approaches Describes techniques for the laboratory and the field Covers social learning mechanisms and strategies statistical modeling techniques for field data mathematical modeling of cultural evolution and more

The Conscious Brain Jesse J. Prinz, 2012-09-13 The problem of consciousness continues to be a subject of great debate in cognitive science Synthesizing decades of research The Conscious Brain advances a new theory of the psychological and neurophysiological correlates of conscious experience Prinz s account of consciousness makes two main claims first consciousness always arises at a particular stage of perceptual processing the intermediate level and second consciousness depends on attention Attention changes the flow of information allowing perceptual information to access memory systems Neurobiologically this change in flow depends on synchronized neural firing Neural synchrony is also implicated in the unity of consciousness and in the temporal duration of experience Prinz also explores the limits of consciousness We have no direct experience of our thoughts no experience of motor commands and no experience of a conscious self All consciousness is perceptual and it functions to make perceptual information available to systems that allows for flexible behavior Prinz concludes by discussing prevailing philosophical puzzles He provides a neuroscientifically grounded response to the leading argument for dualism and argues that materialists need not choose between functional and neurobiological approaches but can instead combine these into neurofunctional response to the mind body problem The Conscious Brain brings neuroscientific evidence to bear on enduring philosophical questions while also surveying challenging and extending philosophical and scientific theories of consciousness All readers interested in the nature of consciousness will find Prinz s work of great interest

Creating Language Morten H. Christiansen, Nick Chater, 2018-04-20 A work that reveals the profound links between the evolution acquisition and processing of language and proposes a new integrative framework for the language sciences Language is a hallmark of the human species the flexibility and unbounded expressivity of our linguistic abilities is unique in the biological world In this book Morten Christiansen and Nick Chater argue that to

understand this astonishing phenomenon we must consider how language is created moment by moment in the generation and understanding of individual utterances year by year as new language learners acquire language skills and generation by generation as languages change split and fuse through the processes of cultural evolution Christiansen and Chater propose a revolutionary new framework for understanding the evolution acquisition and processing of language offering an integrated theory of how language creation is intertwined across these multiple timescales Christiansen and Chater argue that mainstream generative approaches to language do not provide compelling accounts of language evolution acquisition and processing Their own account draws on important developments from across the language sciences including statistical natural language processing learnability theory computational modeling and psycholinguistic experiments with children and adults Christiansen and Chater also consider some of the major implications of their theoretical approach for our understanding of how language works offering alternative accounts of specific aspects of language including the structure of the vocabulary the importance of experience in language processing and the nature of recursive linguistic structure

Imperiled Whiteness Penelope Ingram, 2023-06-23 In *Imperiled Whiteness* Penelope Ingram examines the role played by media in the resurgence of white nationalism and neo Nazi movements in the Obama to Trump era As politicians on the right stoked anxieties about whites losing ground and being left behind media platforms turned whiteness into a commodity that was packaged and disseminated to a white populace Reading popular film and television franchises Planet of the Apes Star Trek and The Walking Dead through political flashpoints such as debates over immigration reform gun control and Black Lives Matter protests Ingram reveals how media cultivated feelings of white vulnerability and loss among white consumers By exploring the convergence of entertainment news and social media in a digital networked environment Ingram demonstrates how media's renewed attention to imperiled whiteness enabled and sanctioned the return of overt white supremacy exhibited by alt right groups in the Unite the Right rally in Charlottesville in 2017 and the Capitol riots in 2021

Intelligence of Apes and Other Rational Beings Duane M. Rumbaugh, David A. Washburn, 2008-10-01 What is animal intelligence In what ways is it similar to human intelligence Many behavioral scientists have realized that animals can be rational can think in abstract symbols can understand and react to human speech and can learn through observation as well as conditioning many of the more complicated skills of life Now Duane Rumbaugh and David Washburn probe the mysteries of the animal mind even further identifying an advanced level of animal behavior emergents that reflects animals natural and active inclination to make sense of the world Rumbaugh and Washburn unify all behavior into a framework they call Rational Behaviorism and present it as a new way to understand

learning intelligence and rational behavior in both animals and humans Drawing on years of research on issues of complex learning and intelligence in primates notably rhesus monkeys chimpanzees and bonobos Rumbaugh and Washburn provide delightful examples of animal ingenuity and persistence showing that animals are capable of very creative solutions to novel challenges The authors analyze learning processes and research methods discuss the meaningful differences across the primate order and point the way to further advances enlivening theoretical material about primates with stories about their behavior and achievements **The Oxford Handbook of Causal Reasoning** Michael Waldmann,2017 The Oxford Handbook of Causal Reasoning offers a state of the art review of one of our most central cognitive competencies which has for a long time been neglected in cognitive psychology This Handbook provides introductions of competing theories of causal reasoning and discusses its role in various cognitive functions and domains **Bonobos** Hare & Yamamoto,2016

Mammalogy George A. Feldhamer, Joseph F. Merritt, Carey Krajewski, Janet L. Rachlow, Kelley M. Stewart, 2020-03-24 A completely revised and updated edition of the leading mammalogy textbook featuring color photographs throughout and a new streamlined structure for enhanced use in courses There are more than 6 400 species in the class Mammalia including the blue whale the largest animal that has ever lived and the pygmy shrew which weighs little more than a dime Such diversity among mammals has allowed them to play critical roles in every ecosystem whether marine freshwater alpine tundra forest or desert Reflecting the expertise and perspective of five leading mammalogists the fifth edition of Mammalogy Adaptation Diversity Ecology significantly updates taxonomy adds a new introductory chapter on the science of mammalogy and highlights several recently described species To enhance its appeal to students textual material has been reduced consolidated and streamlined without sacrificing breadth or depth of coverage The fifth edition includes for the first time stunning color photographs throughout chapters rearranged and grouped to best reflect phylogenetic relationships with updated numbers of genera and species for each family updated mammalian structural and functional adaptations as well as ordinal fossil histories recent advances in mammalian phylogeny biogeography social behavior and ecology with 12 new or revised cladograms reflecting current research findings new breakout boxes on novel or unique aspects of mammals new work on female post copulatory mate choice cooperative behaviors group defense and the role of the vomeronasal system discussions of the current implications of climate change and other anthropogenic factors for mammals Maintaining the accessible readable style for which Feldhamer and his coauthors are well known this new edition of Mammalogy is the authoritative textbook on this amazingly diverse class of vertebrates Society, Organizations and the Brain: building towards a unified cognitive neuroscience perspective Carl Senior, Nick Lee, Sven Braeutigam, 2015-07-02 This e book brings together scholars in both the neurosciences and organizational sciences who have adopted various approaches to study the cognitive mechanisms mediating the social behavior that we see within organizations Such an approach has been termed by ourselves and others as organisational cognitive neuroscience In recent years there has been a veritable increase in studies that have explored the cognitive mechanisms driving such behaviors and much progress has been made in understanding the neural underpinnings of processes such as financial exchange risk awareness and even leadership However while these studies are informative and add to our understanding of human cognition they fall short of providing evidence based recommendations for practice Specifically we address the broader issue of how the neuroscientific study of such core social behaviors can be used to improve the very way that we work To address these gaps in our understanding the chapters in this book serve as a platform that allows scholars in both the neurosciences and the organizational sciences to highlight the work

that spans across these two fields The consolidation of these two fields also serves to highlight the utility of a singular organizational cognitive neuroscience This is a fundamentally important outcome of the book as the application of neuroscience to address economically relevant behaviors has seen a variety of fields evolve in their own right such as neuromarketing neuroeconomics and so forth The use of neuro scientific technologies in particular fMRI has indeed led to a bewildering and somewhat suffocating proliferation of new approaches however the speed of such developments demands that we must proceed carefully with such ventures or risk some fundamental mistakes The book that you now hold will consolidates these new neuroscience based approaches and in doing so highlight the importance of this approach in helping us to understand human social behavior in general Taken together the chapters provide a framework for scholars within the neurosciences who wish to explore the further the opportunities that the study of organisational behavior may provide
