

The Synthesis Essay

WHAT IS A SYNTHESIS?

A synthesis is a written discussion that draws on one or more sources. It follows that your ability to write syntheses depends on your ability to infer relationships among sources - essays, articles, fiction, and also non-written sources, such as lectures, interviews, and observations. This process is nothing new for you, since you infer relationships all the time - say, between something you've read in the newspaper and something you've seen for yourself, or between the teaching styles of your favorite and least favorite instructors. In fact, if you've written research papers, you've already written syntheses. In an academic synthesis, you make explicit the relationships that you have inferred among separate sources.

Clearly, before you're in a position to draw relationships between two or more sources, you must understand what those sources say; in other words, you must be able to summarize these sources. It will frequently be helpful for your readers if you provide at least partial summaries of sources in your synthesis essays. At the same time, you must go beyond summary to make judgments - judgments based, of course, on your critical reading of your sources - as you have practiced in your reading responses and in class discussions. You should already have drawn some conclusions about the quality and validity of these sources; and you should know how much you agree or disagree with the points made in your sources and the reasons for your agreement or disagreement.

Further, you must go beyond the critique of individual sources to determine the relationship among them. Is the information in source B, for example, an extended illustration of the generalizations in source A? Would it be useful to compare and contrast source C with source B? Having read and considered sources A, B, and C, can you infer something else - D (not a source, but your own idea)?

Because a synthesis is based on two or more sources, you will need to be selective when choosing information from each. It would be neither possible nor desirable, for instance, to discuss in a ten-page paper on the battle of Wounded Knee every point that the authors of two books make about their subject. ***What you as a writer must do is select the ideas and information from each source that best allow you to achieve your purpose.***

PURPOSE

Your purpose in reading source materials and then in drawing upon them to write your own material is often reflected in the wording of an assignment. For example, your assignment may ask that you evaluate a text, argue a position on a topic, explain cause and effect relationships, or compare and contrast items. While you might use the same sources in writing an argumentative essay as your classmate uses in writing a comparison/contrast essay, you will make different uses of those sources based on the different purposes of the assignments. What you find worthy of detailed analysis in Source A may be mentioned only in passing by your classmate. Many times, your purpose will be dictated by the assignment.

USING YOUR SOURCES

Your purpose determines not only what parts of your sources you will use but also how you will relate them to one another. Since the very essence of synthesis is the combining of information and ideas, you must have some basis on which to combine them. It follows that the better able you are to discover such relationships, the better able you will be to use your sources in writing syntheses. Your purpose in writing (based on your assignment) will determine how you relate your source materials to one another. Your purpose in writing determines which sources you use, which parts of them you use, at which points in your essay you use them, and in what manner you relate them to one another.

Essays in Commutative Harmonic Analysis C. C. Graham, O. C. McGehee, 2012-12-06 This book considers various spaces and algebras made up of functions measures and other objects situated always on one or another locally compact abelian group and studied in the light of the Fourier transform The emphasis is on the objects themselves and on the structure in detail of the spaces and algebras A mathematician needs to know only a little about Fourier analysis on the commutative groups and then may go many ways within the large subject of harmonic analysis into the beautiful theory of Lie group representations for example But this book represents the tendency to linger on the line and the other abelian groups and to keep asking questions about the structures thereupon That tendency pursued since the early days of analysis has defined a field of study that can boast of some impressive results and in which there still remain unanswered questions of compelling interest We were influenced early in our careers by the mathematicians Jean Pierre Kahane Yitzhak Katznelson Paul Malliavin Yves Meyer Joseph Taylor and Nicholas Varopoulos They are among the many who have made the field a productive meeting ground of probabilistic methods number theory diophantine approximation and functional analysis Since the academic year 1967-1968 when we were visitors in Paris and Orsay the field has continued to see interesting developments Let us name a few Sam Drury and Nicholas Varopoulos solved the union problem for Helson sets by proving a remarkable theorem 2.1.3 which has surely not seen its last use American Catalogue Anonymous, 2023-03-04 Reprint of the original
