Rouse, Denis A. Cortese, 2010 As the United States continues to debate reform of its healthcare system this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access affordability and quality The US healthcare system has many excellent components strong scientific input extraordinary technology for diagnosis and treatment dedicated staff and top class facilities among them But the system has evolved haphazardly over time and although it has not failed entirely the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole it can never hope to succeed Above all they point out that the US system does not provide high value healthcare it has the highest costs in the world and yet many other countries have lower infant mortality rates and better life expectancy Together with a team of highly regarded thought leaders the authors of this publication advocate a complete re thinking of healthcare from a systems perspective an engineering approach to healthcare and they then describe how to set about it Covering a wide range of subjects including health care costs and economics barriers to change integrated health systems electronic records and computer based patient support as well as patient safety and palliative and chronic care this book will be of interest to all those involved in healthcare provision whose goal is affordable care to promote healthy high quality lives *Engineering a Safer World* Nancy G. Leveson, 2016-12-16 A new approach to safety based on systems thinking that is more effective less costly and easier to use than current techniques Engineering has experienced a technological revolution but the basic engineering techniques applied in safety and reliability engineering created in a simpler analog world have changed very little over the years In this groundbreaking book Nancy Leveson proposes a new approach to safety more suited to today s complex sociotechnical software intensive world based on modern systems thinking and systems theory Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept and testing her new model extensively on real world examples Leveson has created a new approach to safety that is more effective less expensive and easier to use than current techniques Arguing that traditional models of causality are inadequate Leveson presents a new extended model of causation Systems Theoretic Accident Model and Processes or STAMP then shows how the new model can be used to create techniques for system safety engineering including accident analysis hazard analysis system design safety in operations and management of safety critical systems She applies the new techniques to real world events including the friendly fire loss of a U S Blackhawk helicopter in the first Gulf War the Vioxx recall the U S Navy SUBSAFE program and the bacterial contamination of a public water supply in a Canadian town Leveson s approach is
