Aashto Design Guide:

AASHTO Guide for Design of Pavement Structures, 1993 American Association of State Highway and Transportation Officials, 1993 Design related project level pavement management Economic evaluation of alternative pavement design strategies Reliability Pavement design procedures for new construction or reconstruction Design requirements Highway pavement structural design Low volume road design Pavement design procedures for rehabilitation of existing pavements Rehabilitation concepts Guides for field data collection Rehabilitation methods other than overlay Rehabilitation methods with overlays Mechanistic empirical design procedures **Roadside Design Guide** American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website *Guidance for Implementation of the AASHTO Strategic Highway Safety Plan* ,2008

Resilient Modulus Testing for Pavement Components Mary Stroup-Gardiner, Gary N. Durham, 2003 Resilient modulus indicates the stiffness of a soil under controlled confinement conditions and repeated loading The test is intended to simulate the stress conditions that occur in the base and subgrade of a pavement system Resilient modulus has been adopted by the U S federal highway administration as the primary performance parameter for pavement design We thank those who prepared these papers the reviewers who provided anonymous peer reviews and those who participated in the symposium We hope this STP encourages more work to improve the testing standard and the value of the Resilient Modulus test The Handbook of Highway Engineering T.F. Fwa, 2005-09-28 Modern highway engineering reflects an integrated view of a road system s entire lifecycle including any potential environmental impacts and seeks to develop a sustainable infrastructure through careful planning and active management This trend is not limited to developed nations but is recognized across the globe Edited by renowned authority **A Guide for Achieving Flexibility in Highway Design** ,2004 Context sensitive solutions CSS reflect the need to consider highway projects as more than just transportation facilities Depending on how

highway projects are integrated into the community they can have far reaching impacts beyond their traffic or transportation function CSS is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community Achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used This AASHTO Guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context It also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture This publication represents a major step toward institutionalizing CSS into state transportation departments and other agencies charged with transportation project development Guideline and Recommended Standard for Geofoam Applications in Highway Embankments Timothy D. Stark, National Cooperative Highway Research Program, 2004 Human Factors Guidelines for Road Systems John L. Campbell, 2012 This report completes and updates the first edition of NCHRP Report 600 Human Factors Guidelines for Road Systems HFG which was published previously in three collections The HFG contains guidelines that provide human factors principles and findings for consideration by and is a resource document for highway designers traffic engineers and other safety practitioners Foreword Guidelines for Analysis Methods and Construction Engineering of Curved and Skewed Steel Girder Bridges, 2012 TRB s National Cooperative Highway Research Program NCHRP Report 725 Guidelines for Analysis Methods and Construction Engineering of Curved and Skewed Steel Girder Bridges offers guidance on the appropriate level of analysis needed to determine the constructability and constructed geometry of curved and skewed steel girder bridges When appropriate in lieu of a 3D analysis the guidelines also introduce improvements to 1D and 2D analyses that require little additional computational costs Publication information **The Code of Federal Regulations of the United States of America**, 1975 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government
