Aashto Roadside Design Guide 2006:

Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website **Manual on Uniform Traffic Control Devices for Streets and Highways** U.S. Department of Transportation, Federal Highway Administration, The Manual on Uniform Traffic Control Devices or MUTCD defines the standards used by road managers nationwide to install and maintain traffic control devices on all streets and highways The Manual is important as it provides national traffic control standards for all public roads and includes traffic signals signs roadway stencils pedestrian crossings and bicycle and pedestrian treatments The Highway Design Handbook for Older Drivers and Pedestrians being updated this year is provided leading research information which may as verified and tested become standards in the MUTCD in future years p p1 margin 0 0px 0 0px 0 0px 0 0px font 13 0px Helvetica **Manual on Uniform Traffic Control Devices for Streets and Highways** United States. H. Maze,Neal Hawkins,Christian Sax,2008 In urban communities there are often limited amounts of right of way available for establishing a large setback distance from the curb for fixed objects Urban communities must constantly weigh the cost of purchasing additional right of way for clear zones against the risk of fixed object crashes From 2004 to 2006 this type of crash on curbed roads represented 15% of all fatal crashes and 3% of all crashes in the state of Iowa Many states have kept the current minimum AASHTO recommendations as their minimum clear zone standards however other states have decided that these recommendations are insufficient and have increased the required minimum clear zone distance to better suit the judgment of local designers This report presents research on the effects of the clear zone on urban curbed streets The research was conducted in two phases The first phase involved a synthesis of practice that

included a literature review and a survey of practices in jurisdictions that have developmental and historical patterns similar to those of Iowa The second phase involved investigating the benefits of a 10 ft clear zone which included examining urban corridors in Iowa that meet or do not meet the 10 ft clear zone goal The results of this study indicate that a consistent fixed object offset results in a reduction in the number of fixed object crashes a 5 ft clear zone is most effective when the goal is to minimize the number of fixed object crashes and a 3 ft clear zone is most effective when the goal is to minimize the cost of fixed object crashes
