Advances in Aerospace Guidance, Navigation and Control Florian Holzapfel, Stephan Theil, 2011-03-15. Over the last few decades, both the aeronautics and space disciplines have greatly influenced advances in controls, sensors, data fusion, and navigation. Many of those achievements that made the word aerospace synonymous with high tech were enabled by innovations in guidance, navigation, and control. Europe has seen a strong transnational consolidation process in aerospace over the last few decades. Most of the visible products like commercial aircraft, fighters, helicopters, satellites, launchers, or missiles are not made by a single country; they are the fruits of cooperation. No European country by itself hosts a specialized guidance, navigation, and controls community large enough to cover the whole spectrum of disciplines. However, on a European scale, mutual exchange of ideas, concepts, and solutions is enriching for all. The 1st CEAS Specialist Conference on Guidance, Navigation, and Control is an attempt to bring this community together. This book is a selection of papers presented at the conference. All submitted papers have gone through a formal review process in compliance with good journal practices. The best papers have been recommended by the reviewers to be published in this book.
