Information Infrastructure Systems for Manufacturing II John J. Mills, Fumihiko Kimura, 2013-03-09 In this global society manufacturers compete in many ways and information infrastructures play a critical

role in ensuring the right information is available at the right time and the right place to support informed decision making. The traditional approach that assumes all information can be located on a single mainframe and accessed by everybody in the enterprise has fallen by the wayside and new infrastructures supporting extended or virtual enterprises and globally distributed supply chains are becoming increasingly vital to successful competitive organizations. Functions data and information must be made available to all without regard to location accessibility or the ability to view in a native format. This book is a result of a conference which brought together a number of leading experts from around the world that work on topics related to the design implementation and use of information infrastructures for manufacturing. These experts presented their views on the state of the art and on a wide variety of topics related to the title. The topics range from the establishment of a generic enterprise framework which can be used for the design of a supporting information infrastructure to details of how geometric surfaces should be merged together. Although not an exhaustive publication we believe that the publications in this book represent the state of the art in this research is essential reading for anyone who is attempting the design or development of an information infrastructure for all aspects of Manufacturing.
