A S Pabla Electrical Power System Planning:

A Textbook of Electric Power Distribution Automation Dr. M.K. Khedkar, Dr. G.M. Dhole, 2010 *Electric Power System Planning* Hossein Seifi, Mohammad Sadegh Sepasian, 2011-06-24 The present book addresses various power system planning issues for professionals as well as senior level and postgraduate students Its emphasis is on long term issues although much of the ideas may be used for short and mid term cases with some modifications Back up materials are provided in twelve appendices of the book The readers can use the numerous examples presented within the chapters and problems at the end of the chapters to make sure that the materials are adequately followed up Based on what Matlab provides as a powerful package for students and professional some of the examples and the problems are solved in using M files especially developed and attached for this purpose This adds a unique feature to the book for in depth understanding of the materials sometimes difficult to apprehend mathematically Chapter 1 provides an introduction to Power System Planning PSP issues and basic principles As most of PSP problems are modeled as optimization problems optimization techniques are covered in some details in Chapter 2 Moreover PSP decision makings are based on both technical and economic considerations so economic principles are briefly reviewed in Chapter 3 As a basic requirement of PSP studies the load has to be known Therefore load forecasting is presented in Chapter 4 Single bus Generation Expansion Planning GEP problem is described in Chapter 5 This study is performed using WASP IV developed by International Atomic Energy Agency The study ignores the grid structure A Multi bus GEP problem is discussed in Chapter 6 in which the transmission effects are somehow accounted for The results of single bus GEP is used as an input to this problem SEP problem is fully presented in Chapter 7 Chapter 8 devotes to Network Expansion Planning NEP problem in which the network is planned The results of NEP somehow fixes the network structure Some practical considerations and improvements such as multi voltage cases are discussed in Chapter 9 As NEP study is typically based on some simplifying assumptions and Direct Current Load Flow DCLF analysis detailed Reactive Power Planning RPP study is finally presented in Chapter 10 to guarantee acceptable ACLF performance during normal as well as contingency conditions This somehow concludes the basic PSP problem The changing environments due to power system restructuring dictate some uncertainties on PSP issues It is shown in Chapter 11 that how these uncertainties can be accounted for Although is intended to be a text book PSP is a research oriented topic too That is why Chapter 12 is devoted to research trends in PSP The chapters conclude with a comprehensive example in Chapter 13 showing the step by step solution of a practical case
