lighting systems on roads and vehicles work by explaining the thinking and scientific reasoning behind various forms of lighting and analyzing their contribution to the driver's understanding of real and potential road hazards. This book will be an ideal read for ergonomists and engineers engaged in transport and road engineering, transport planners, civil engineers, vehicle designers and electrical engineers. **Urban Transport XXVI** S. Syngellakis, 2020-11-24. A continuous requirement for better urban transport systems and the need for a healthier environment has resulted in an increasing demand for new solutions. Innovative systems, new approaches and original ideas need to be thoroughly tested and critically evaluated before they can be implemented in practice. Moreover, there is a growing need for integration with telecommunications systems and IT applications in order to improve safety, security and efficiency. This volume also addresses the need to solve important pollution problems associated with urban transport in order to achieve a healthier environment. The variety of topics covered by the included research works, which were presented at the 26th International Conference on Urban Transport and the Environment, reflect the complex interaction of urban transport systems with their environment and the need to establish integrated strategies. The goal is to arrive at optimal socio-economic solutions while reducing the negative environmental impacts of current transportation systems.

Research Methods in Modern Urban Transportation Systems and Networks Elżbieta Macioszek, Grzegorz Sierpiński, 2021-04-15. This book presents many valuable research methods useful in conducting research in modern urban transportation systems and networks. The knowledge base in practical examples as well as the decision support methods described in this book is of interest to people who face the challenge of searching for solutions to the problems of contemporary transport networks and systems on a daily basis. The book is therefore addressed to local authorities related to the planning and development of strategies for selected areas with regard to transport both in the urban and regional dimensions and to representatives of business and industry as people directly involved in the implementation of urban transportation systems and networks solutions. The methods contained in individual chapters of the book allow to look at a given problem in an advanced way and facilitate the selection of the appropriate strategy, e.g. in relation to the air quality in considering the impact of the atmospheric emission from the urban road traffic, the role of incentive programs in promoting the purchase of electric cars, life cycle costing, decision making methodology and urban intersection design, but also in assessing the impact of the socio-financial conditions on the bike sharing system operation and its implementation in medium-sized cities etc. In turn, due to the new approach to theoretical models including comparison methods of driving errors in a single lane and multi-lane roundabouts, methods of parking measurements, methods of ensuring the technical readiness of transport companies' fleet due to the region's capabilities as well as speed-related surrogate measures of road safety based on floating car data, the book is also of interest to scientists and researchers carrying out research in this area.
