Scale Drawings & Models	A scale drawing or model is used to represent an object that is too big or too small to be shown in its actual size. The dimensions of the object on the scale drawing or model are proportional to the dimensions of the actual object.
Scale	- The scale is the _____ of the size of the model to its actual size. Scale = _____ - A scale can have the same units or different units. - You can use a scale to find a missing measure on the model or the actual object. Simply set up and solve a proportion.
Directions: Solve each word problem using a proportion.	
1. The scale on a drawing for a new pool is 2 inches = 7 feet. If the length of the pool on the drawing is 10 inches, what is the actual length of the pool?	2. The blueprint for a house uses the scale 1.5 inches = 2 feet. If the living room is 18 feet long, find its length on the blueprint.
3. A model of a car uses a scale of 2 $\frac{1}{4}$ inches = 3 feet. If the model is 1.4 inches long, what is the actual length of the car?	4. The scale on a map reads 2 inches = 125 miles. If two cities are 4 $\frac{1}{4}$ inches apart on the map, what is their actual distance?
5. The wingspan of an airplane is 197 feet. A model of this airplane uses a scale of 5 inches = 40 feet. What is the wingspan of the model airplane?	6. A scale model of a new building was created for approval by the city. The scale of the model is 3 inches = 20 feet. If the model is 5 feet tall, how tall is the actual building?

Bruner, John Rognes, 2021-12-23 The connective topological modular forms spectrum tmf is in a sense initial among elliptic spectra and as such is an important link between the homotopy groups of spheres and modular forms A primary goal of this volume is to give a complete account with full proofs of the homotopy of tmf and several tmf module spectra by means of the classical Adams spectral sequence thus verifying correcting and extending existing approaches In the process folklore results are made precise and generalized Anderson and Brown Comenetz duality and the corresponding dualities in homotopy groups are carefully proved The volume also includes an account of the homotopy groups of spheres through degree 44 with complete proofs except that the Adams conjecture is used without proof Also presented are modern stable proofs of classical results which are hard to extract from the literature Tools used in this book include a multiplicative spectral sequence generalizing a construction of Davis and Mahowald and computer software which

computes the cohomology of modules over the Steenrod algebra and products therein Techniques from commutative algebra are used to make the calculation precise and finite The H infinity ring structure of the sphere and of tmf are used to determine many differentials and relations

Analysis and Quantum Groups Lars Tuset, 2022-07-27 This volume presents a completely self contained introduction to the elaborate theory of locally compact quantum groups bringing the reader to the frontiers of present day research The exposition includes a substantial amount of material on functional analysis and operator algebras subjects which in themselves have become increasingly important with the advent of quantum information theory In particular the rather unfamiliar modular theory of weights plays a crucial role in the theory due to the presence of Haar integrals on locally compact quantum groups and is thus treated quite extensively The topics covered are developed independently and each can serve either as a separate course in its own right or as part of a broader course on locally compact quantum groups The second part of the book covers crossed products of coactions their relation to subfactors and other types of natural products such as cocycle bicrossed products quantum doubles and doublecrossed products Induced corepresentations Galois objects and deformations of coactions by cocycles are also treated Each section is followed by a generous supply of exercises To complete the book an appendix is provided on topology measure theory and complex function theory

New Trends in Quantum Structures Anatolij Dvurecenskij, Sylvia Pulmannová, 2013-06-29 D Hilbert in his famous program formulated many open mathematical problems which were stimulating for the development of mathematics and a fruitful source of very deep and fundamental ideas During the whole 20th century mathematicians and specialists in other fields have been solving problems which can be traced back to Hilbert's program and today there are many basic results stimulated by this program It is sure that even at the beginning of the third millennium mathematicians will still have much to do One of his most interesting ideas lying between mathematics and physics is his sixth problem To find a few physical axioms which similar to the axioms of geometry can describe a theory for a class of physical events that is as large as possible We try to present some ideas inspired by Hilbert's sixth problem and give some partial results which may contribute to its solution In the Thirties the situation in both physics and mathematics was very interesting A N Kolmogorov published his fundamental work Grundbegriffe der Wahrscheinlichkeitsrechnung in which he for the first time axiomatized modern probability theory From the mathematical point of view in Kolmogorov's model the set L of experimentally verifiable events forms a Boolean algebra and by the Loomis Sikorski theorem roughly speaking can be represented by a algebra S of subsets of some non void set n

Westerberg,2016-08-24 What s the best way to ensure that grading policies are fair accurate and consistent across classrooms How can schools transition to a grading system that better reflects what students are actually learning Tim R Westerberg makes this journey easier by offering a continuum of options with four destinations on the road to improved grading and assessment Destination 1 critically examines such popular grading mechanisms as the zero extra credit the semester killer project averaging mixing academic performance with work ethic and refusing to accept late work and explains how they undermine objectivity and instead result in widely divergent grades for comparable work with major consequences for students Destination 2 invites educators to put assessment and grading into the larger context of a districtwide guaranteed and viable curriculum and lays out the organizational conditions and necessary steps to accomplish this goal Destination 3 brings parents and others on board with a multiyear implementation plan and community engagement strategies for introducing report cards that indicate student achievement by standards rather than or in addition to letter grades Destination 4 competency based education involves a total rethinking of the nature and structure of school leading to individualized education for all students However far they choose to go administrators and teacher leaders can turn to Charting a Course to Standards Based Grading for the quick wins and long term support and guidance they need to make the trip well worth the effort Resources in Education ,1988
