Cumulative Index to Nursing Literature Cinahl Information Systems Staff, 1999 Family work in Mental Health: A skills approach Dr Nicola Evans, 2019-12-03. Mental health practitioners often think about the person seeking help as the first priority and the context in which they live may become a secondary consideration. However, there is now good evidence that working with families can be very helpful both for family members and for the person experiencing mental health issues. For instance, offering family intervention for people with psychosis can in some cases reduce the relapse rate. Working with the whole family can also help reduce the burden placed on carers. For example, in families of people with dementia. Written by a team of experts in the field, this book gives useful practical guidance on a range of ways in which mental health practitioners can work with children, adults and families who access mental health services. Where possible, hypothetical examples are used to show how a particular theory or model can be applied in practice. The authors have also drawn on interventions and approaches where there is an established evidence base showing how collaborative approaches can be adapted to meet the particular needs of individual families.
